

# Full Stack Architecture

Design of SvelteKit full  
stack applications

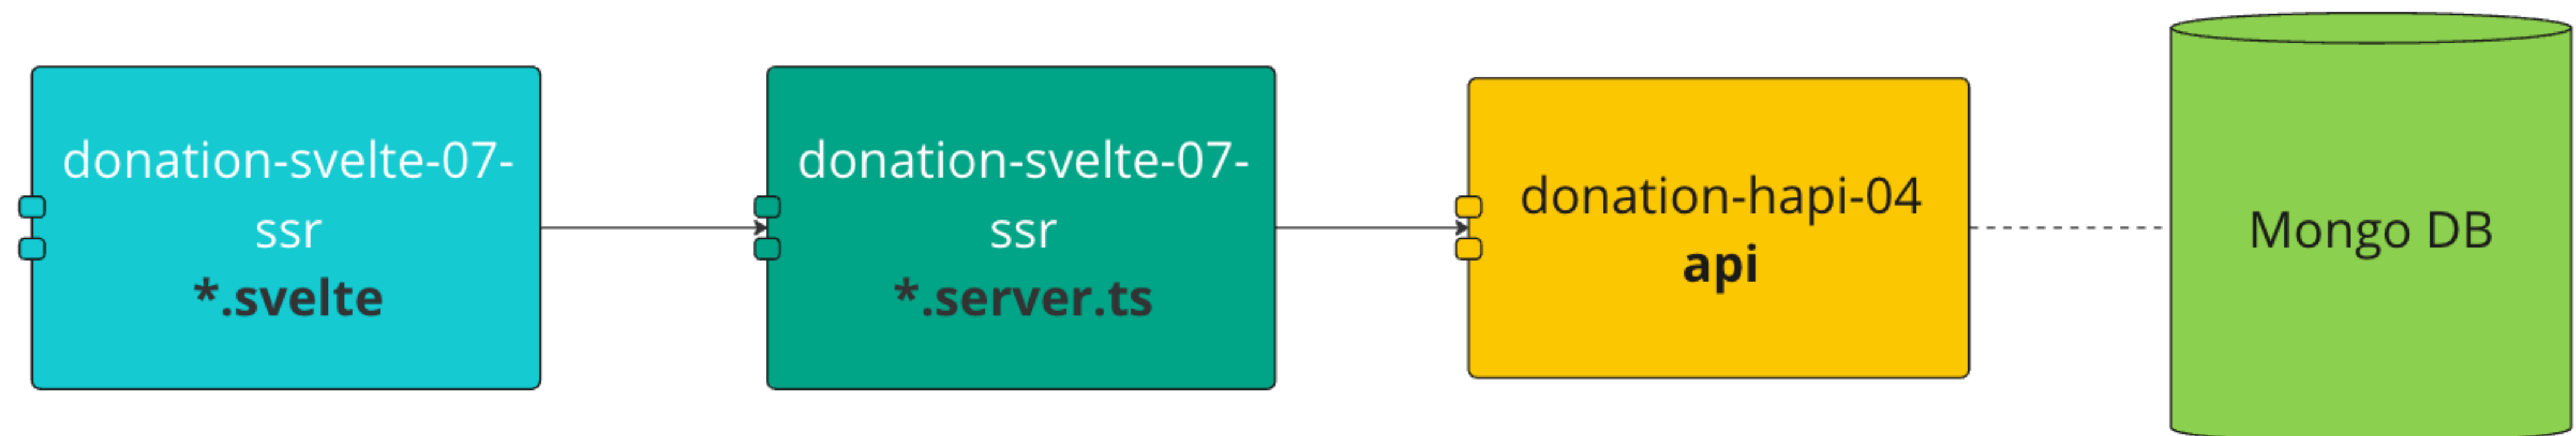

## Full Stack

- Currently we have 2 application:
  - Hapi donation application
  - SvelteKit application

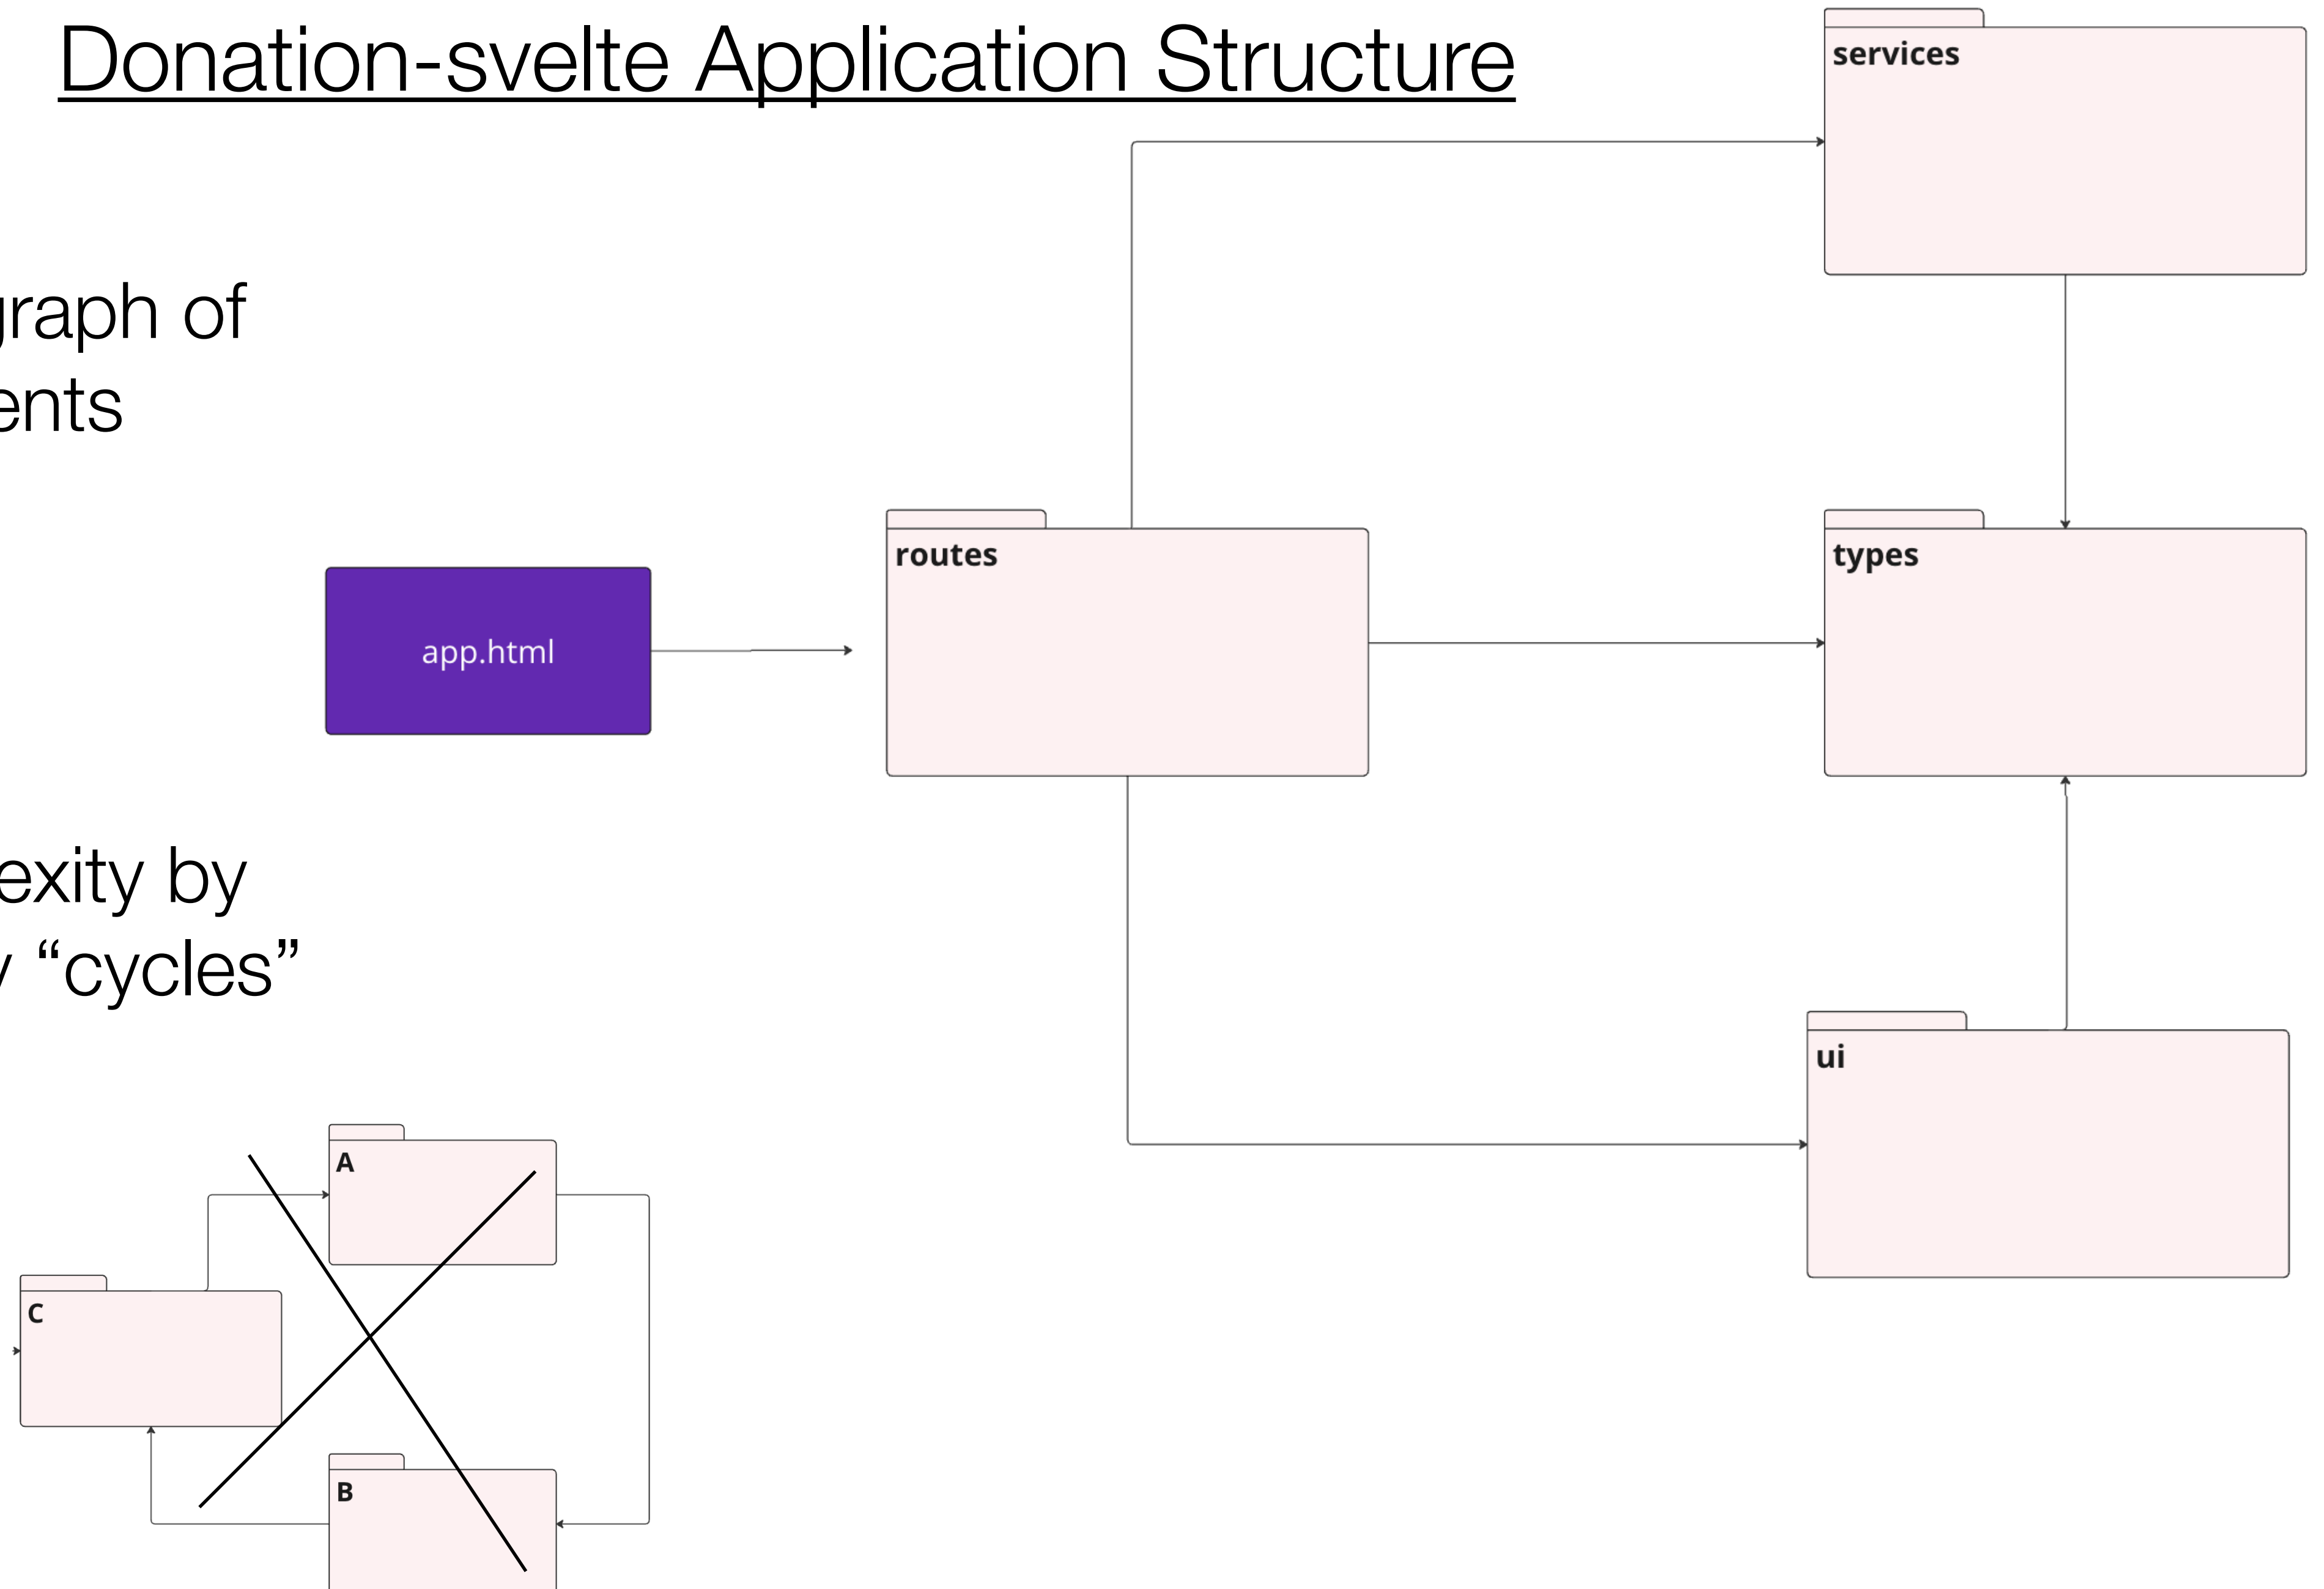

## Full Stack

- SvelteKit Application:
  - \*.svelte components in the browser
  - \*.server.ts server side components

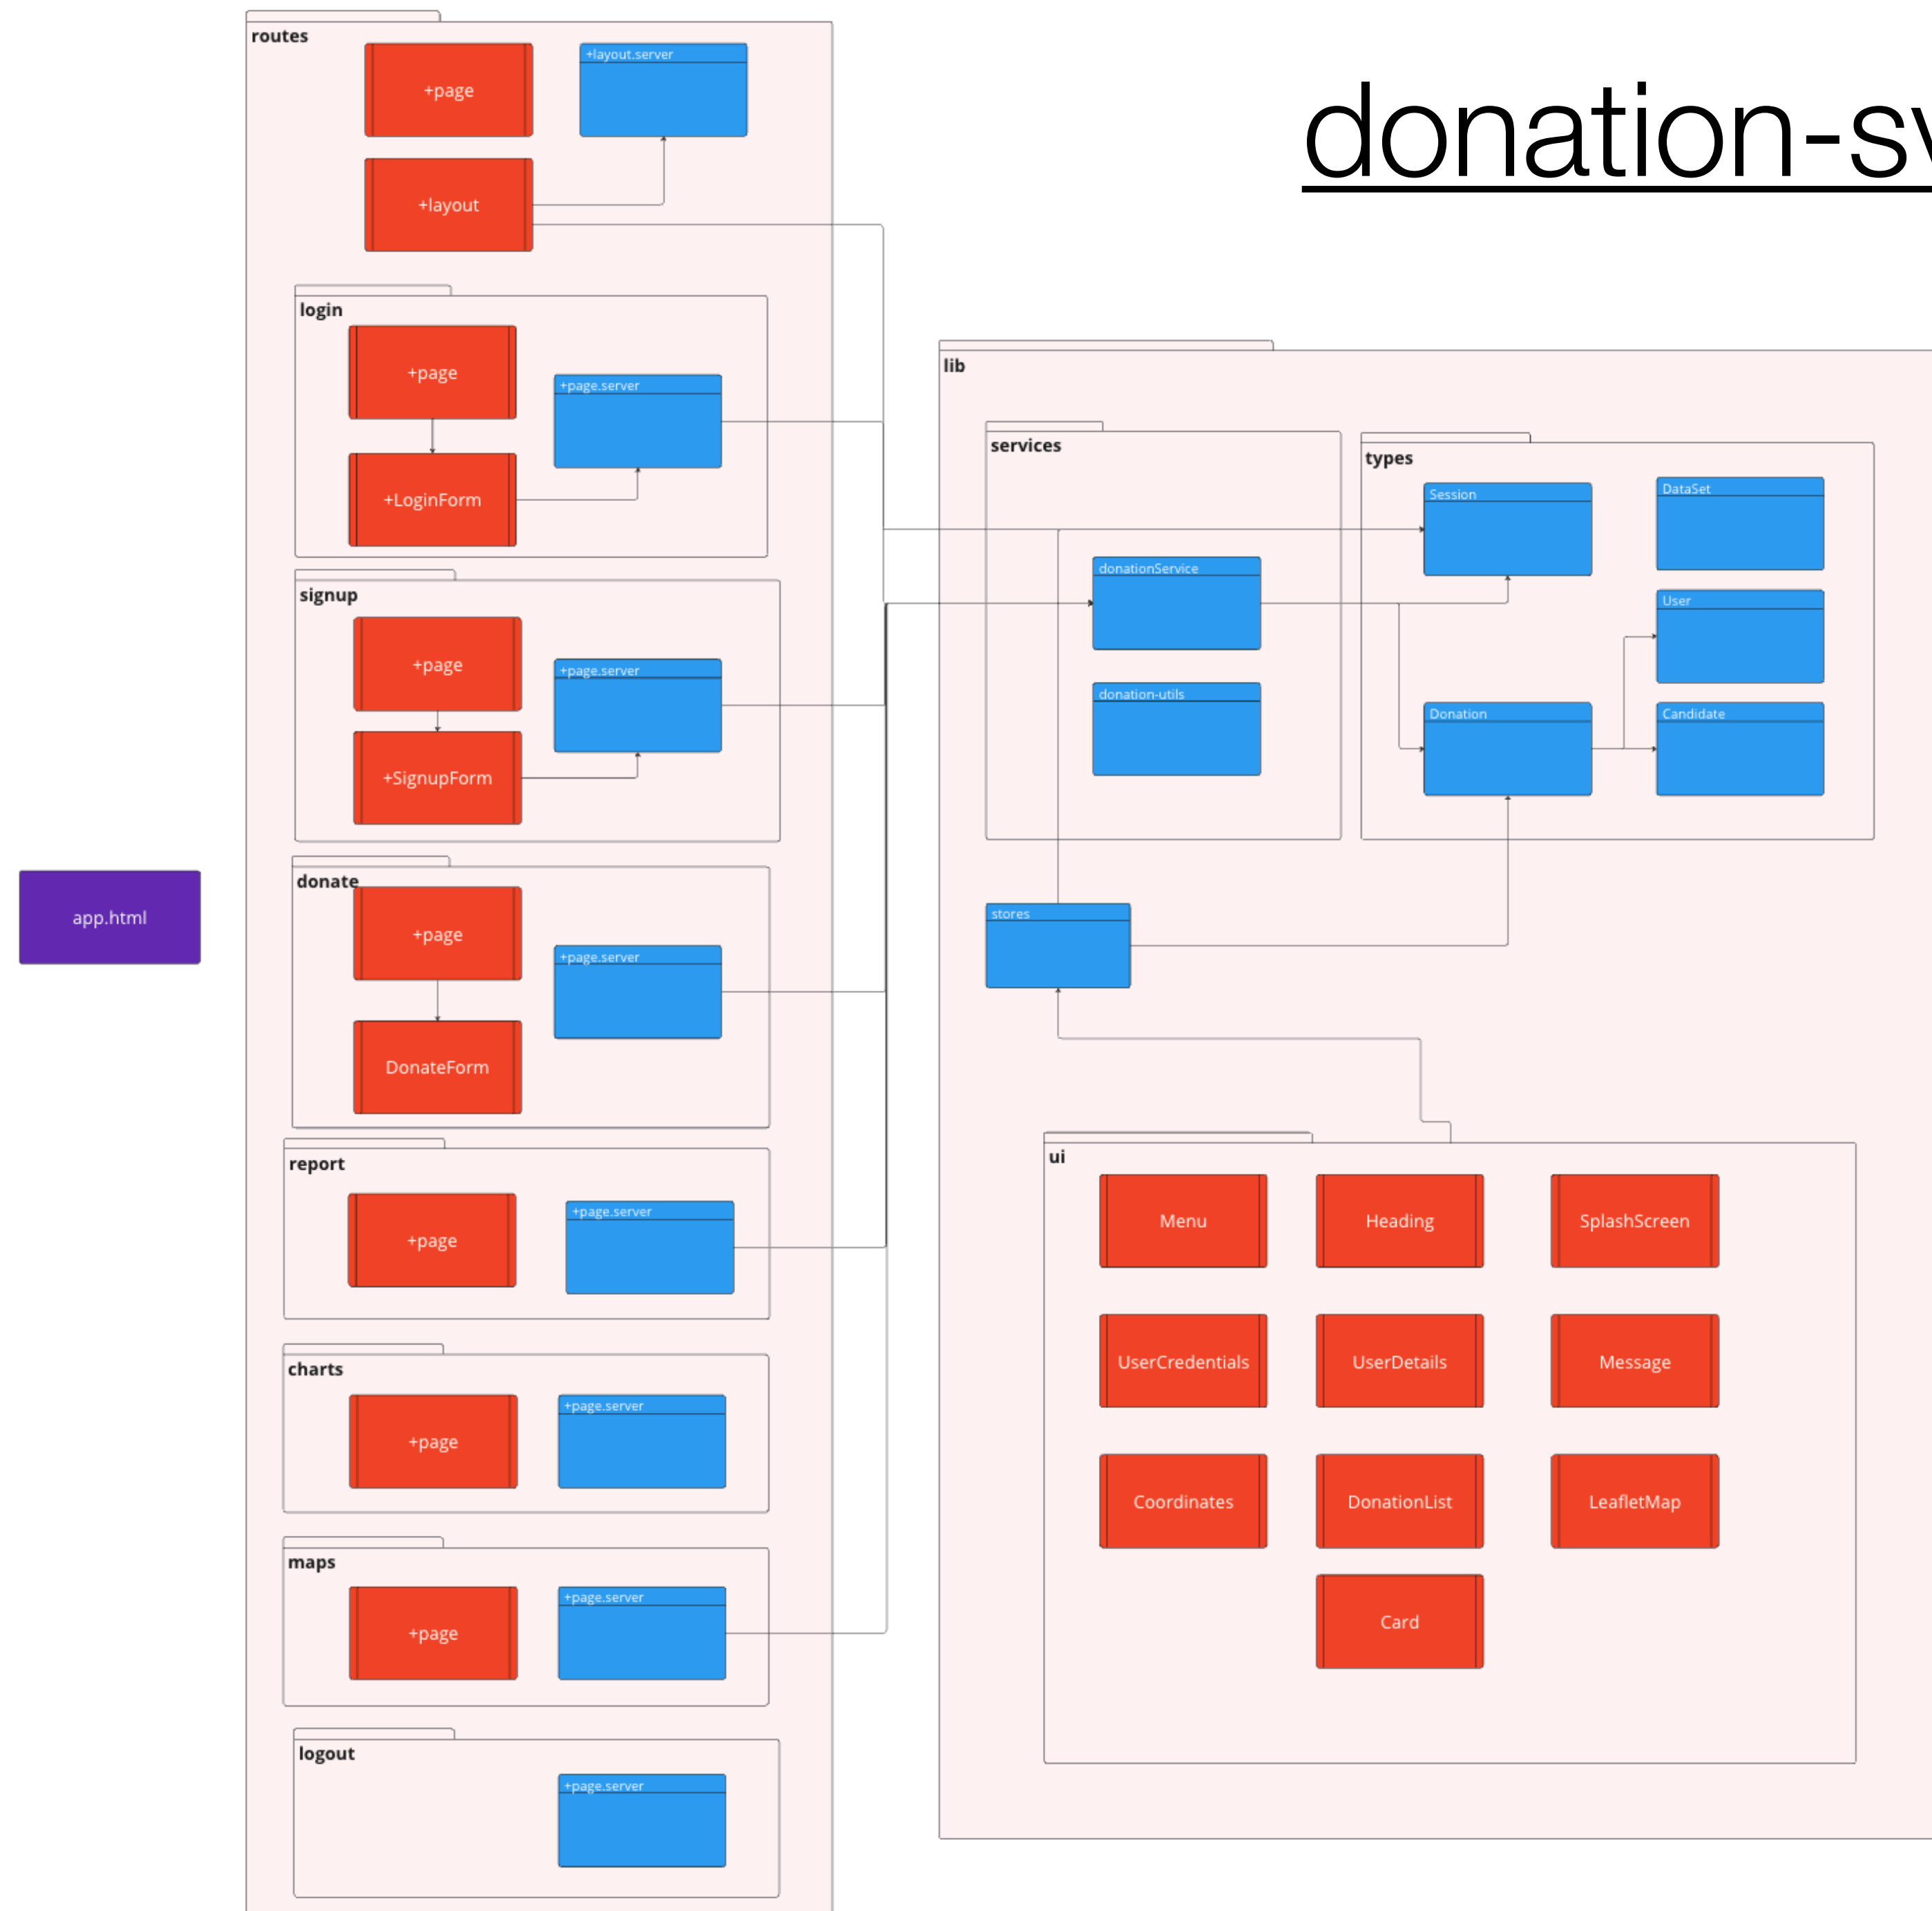

# Donation-svelte Application Structure

- Dependency graph of main components
- Unidirectional dependencies
- Control complexity by eliminating any “cycles”

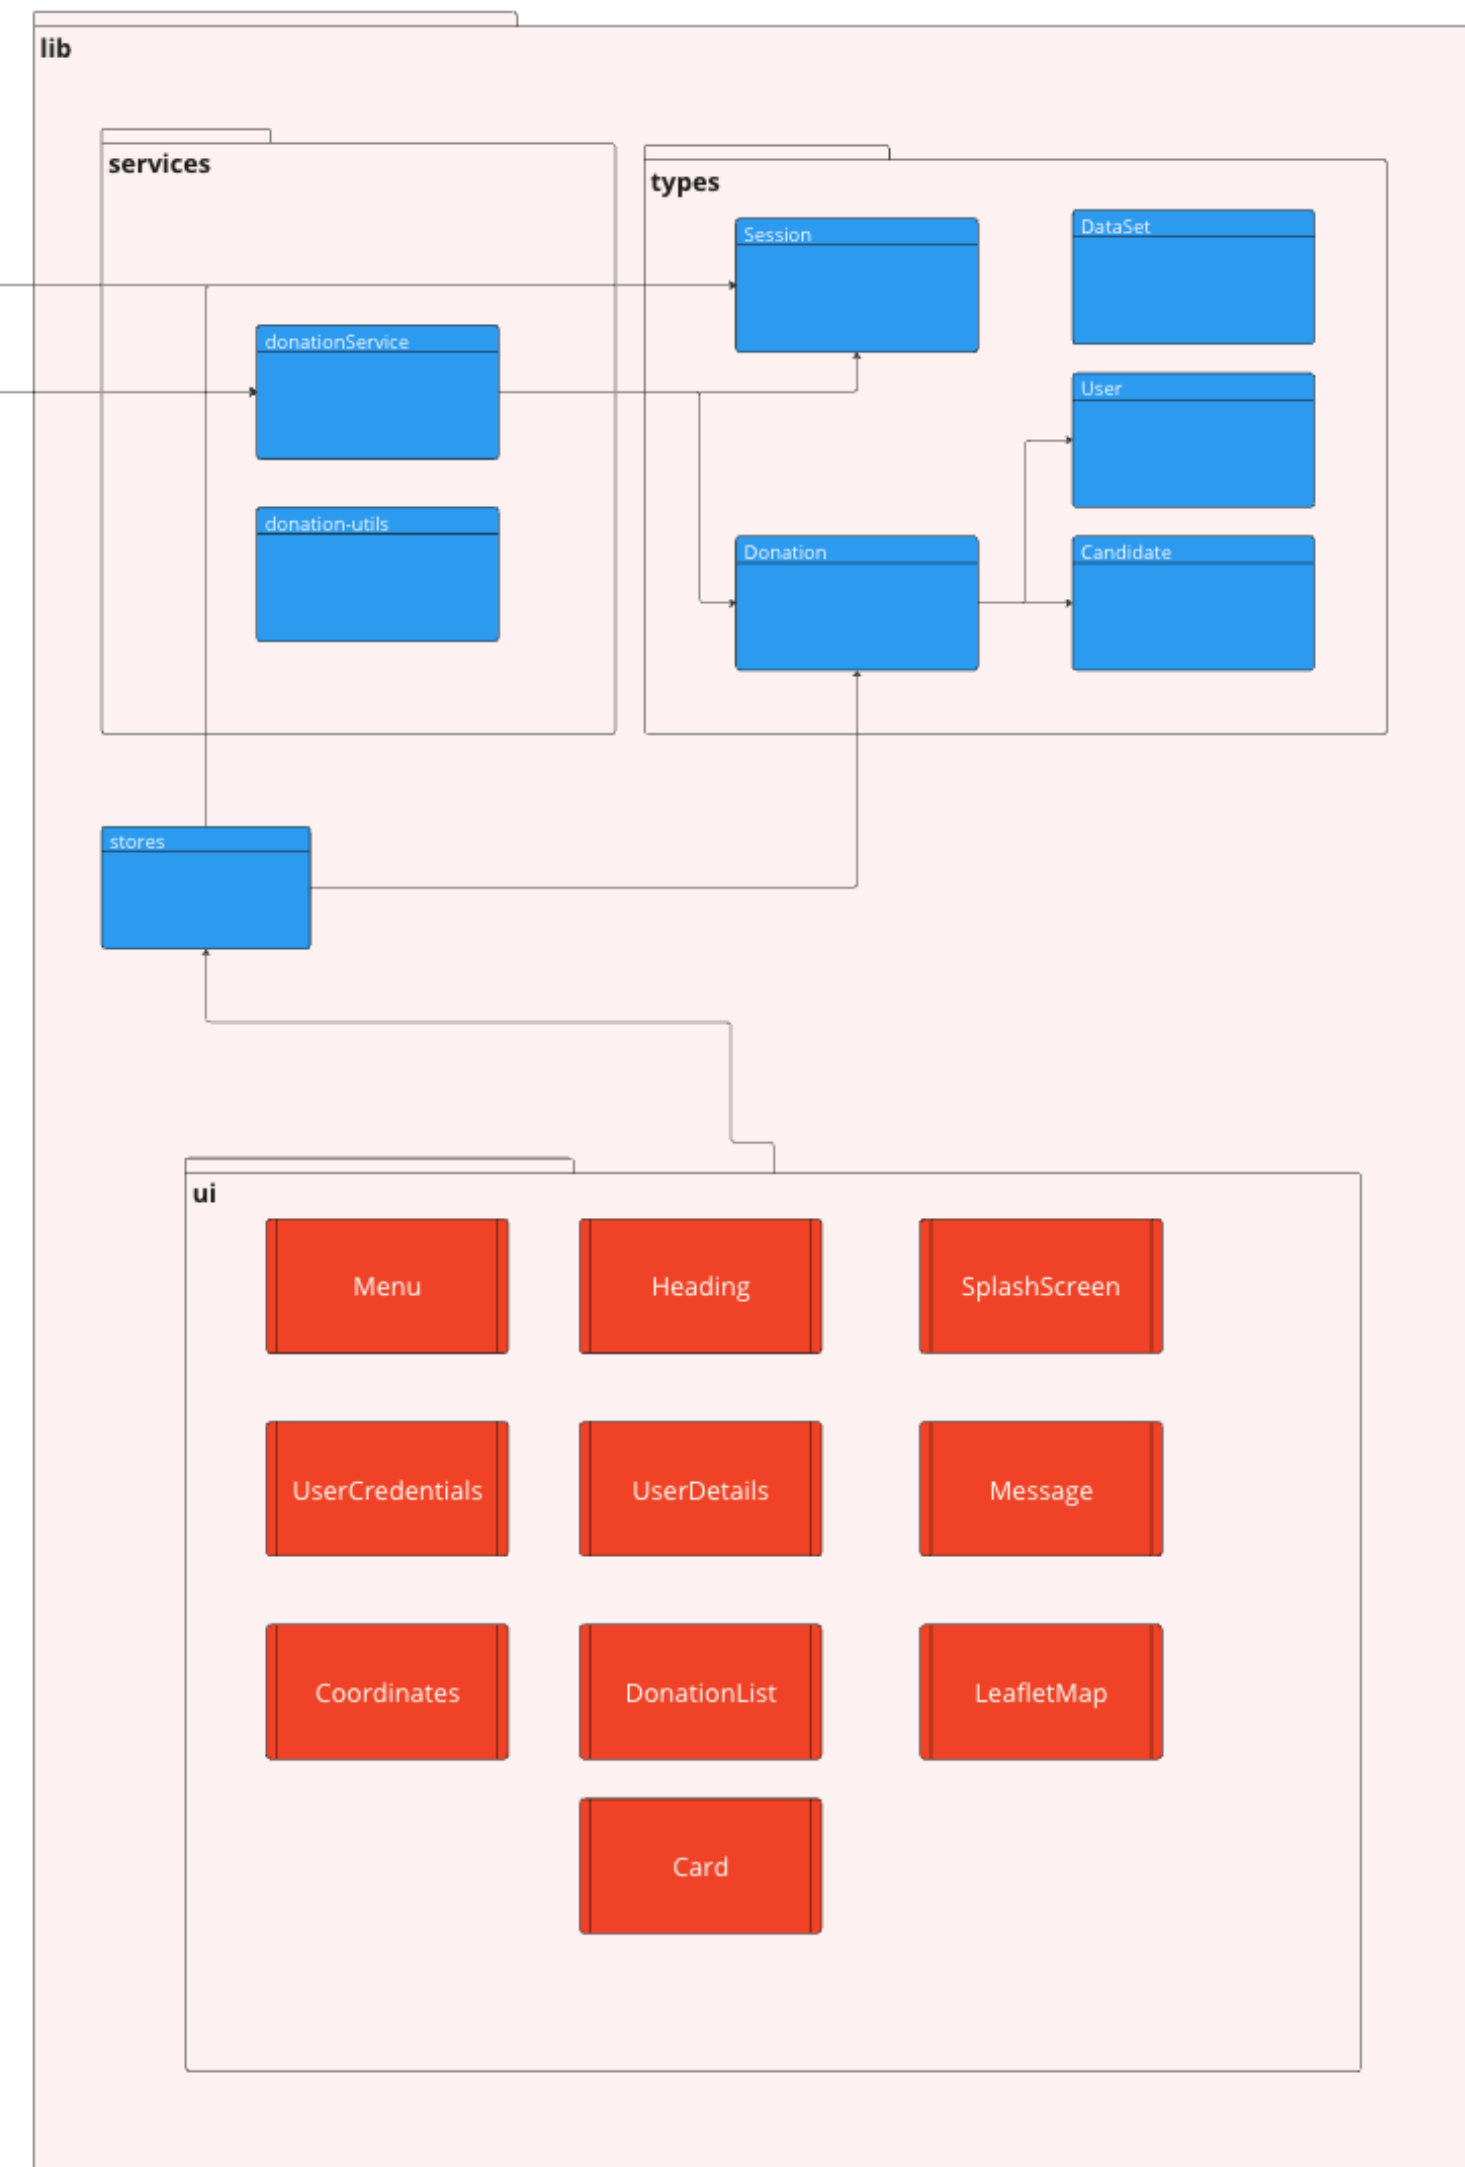

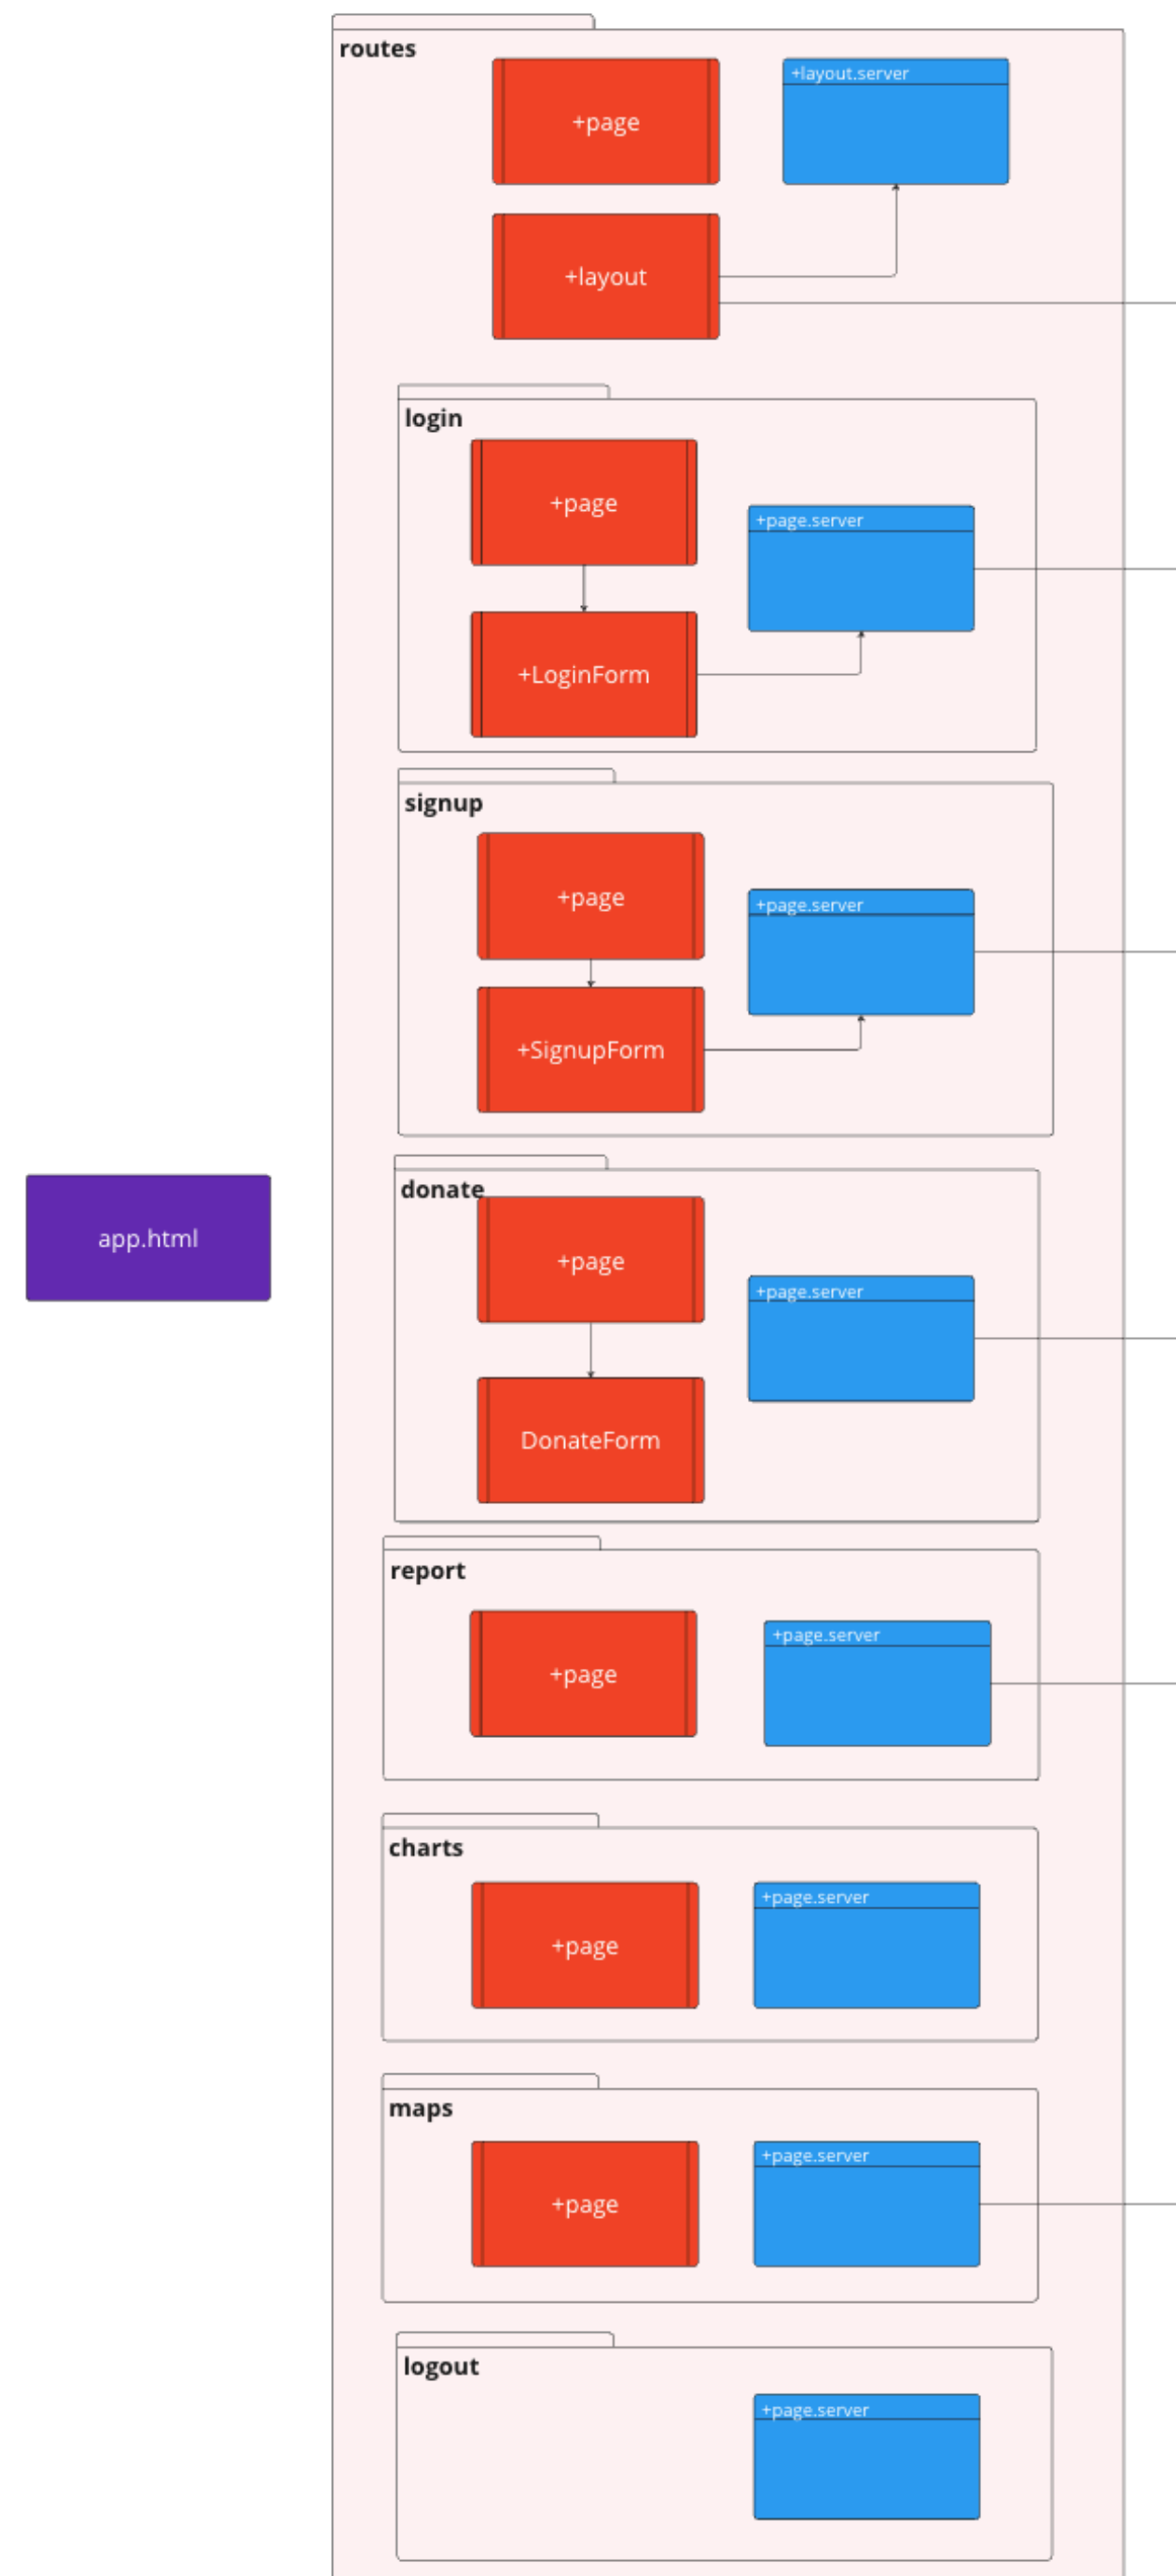

# donation-svelte-07-ssr

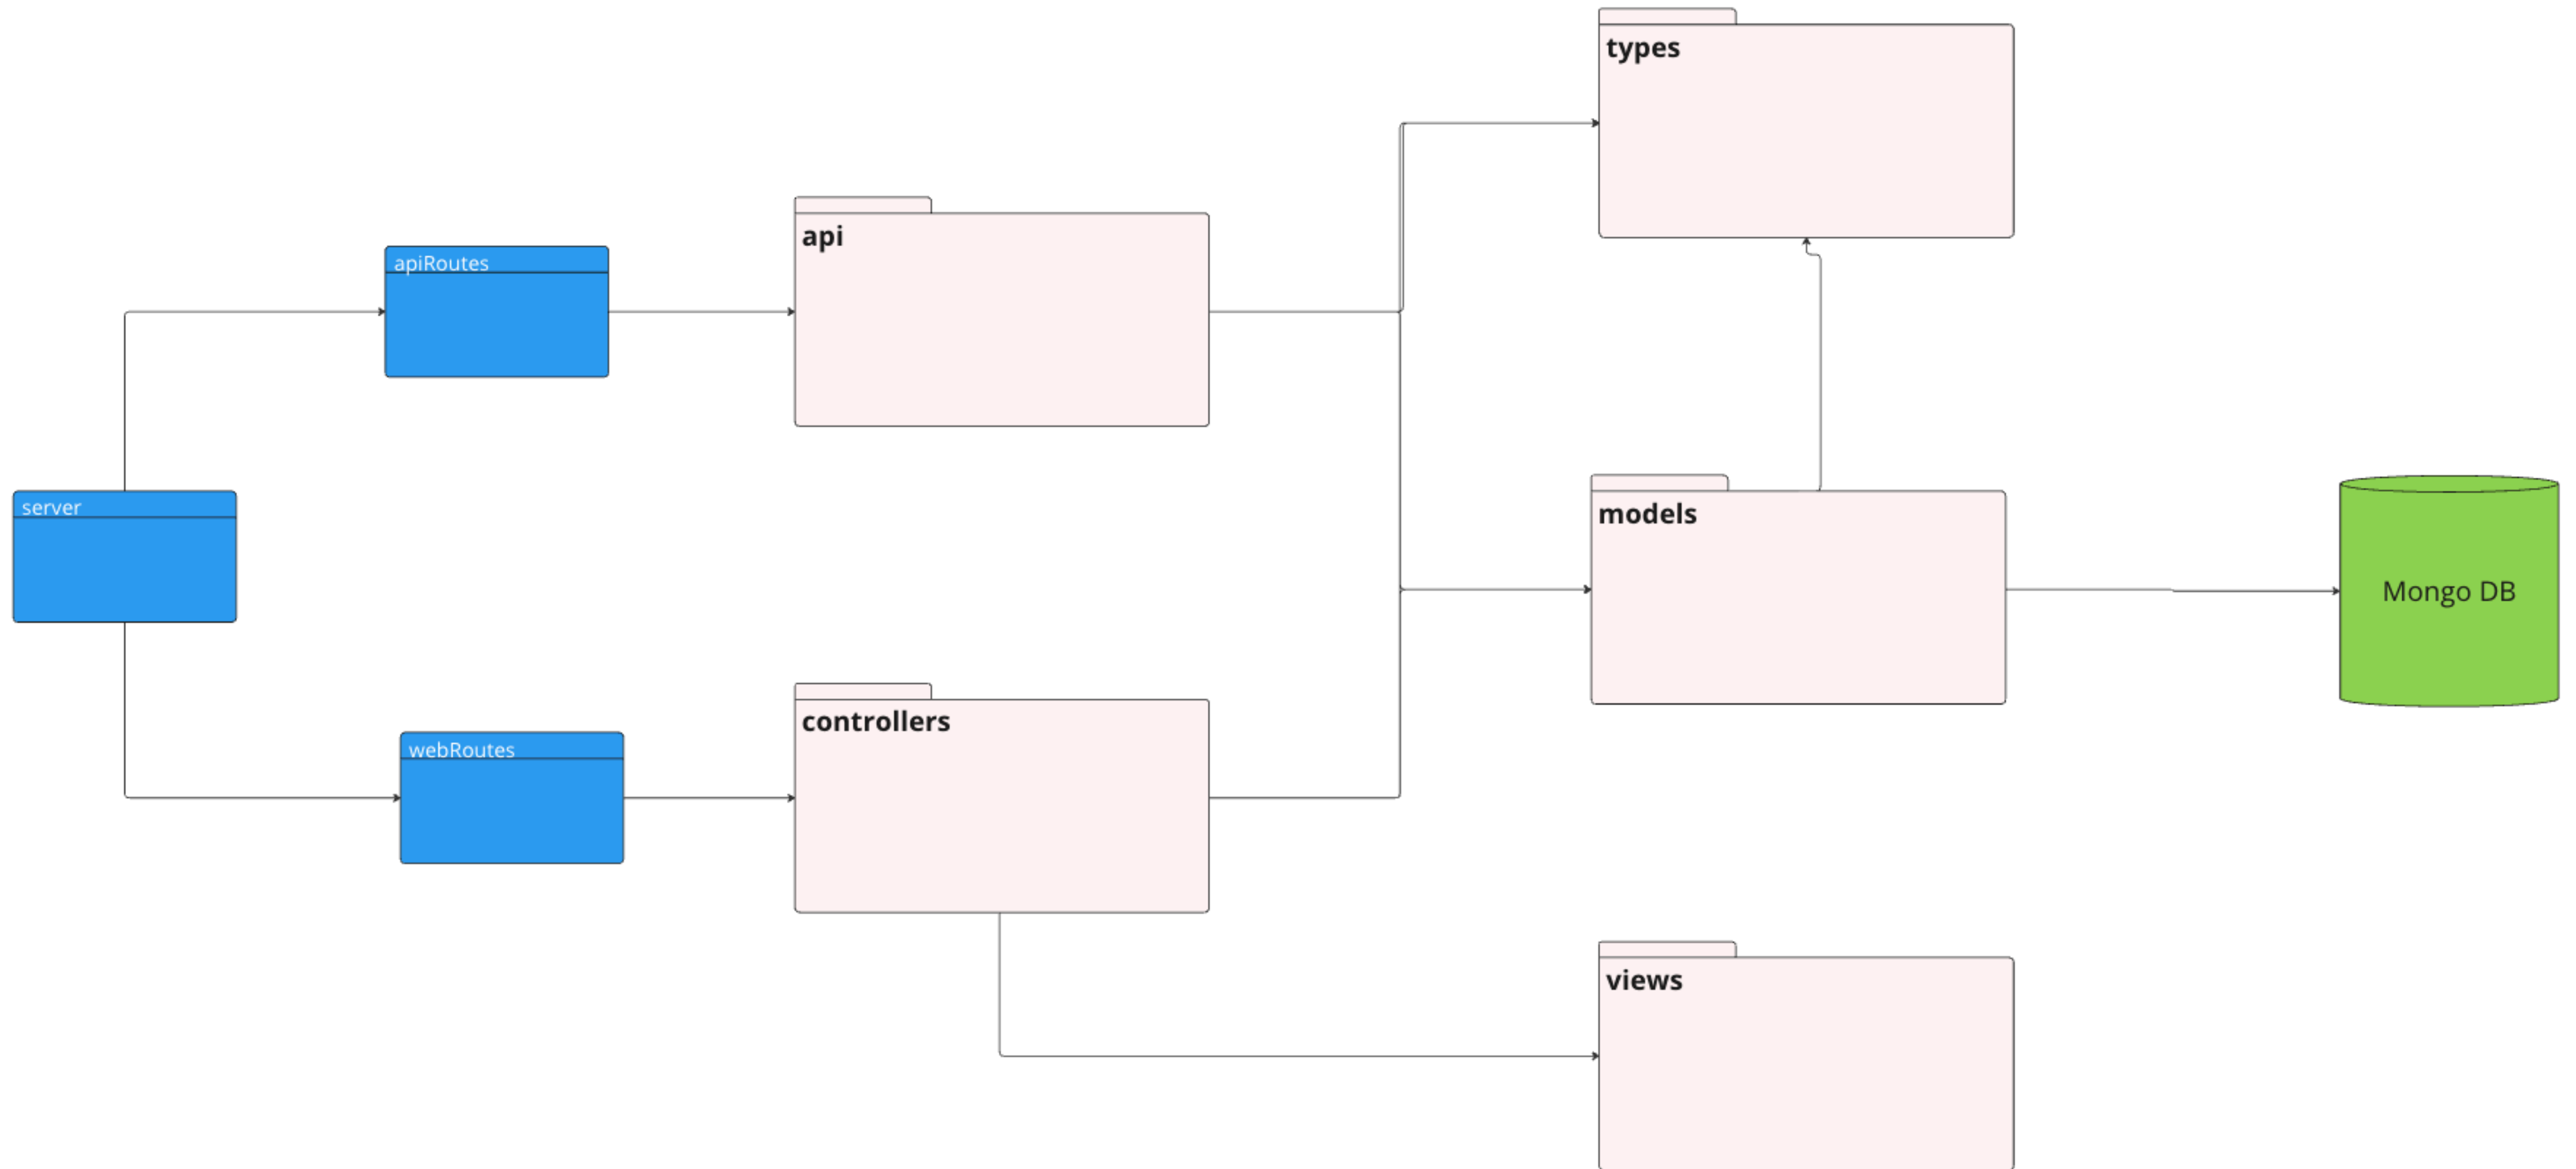

# donation-svelte-07-ssr

- routes
  - charts
    - TS +page.server.ts
    - +page.svelte
  - login
    - TS +page.server.ts
    - +page.svelte
    - DonateForm.svelte
  - login
    - TS +page.server.ts
    - +page.svelte
    - LoginForm.svelte
  - logout
    - TS +page.server.ts
    - +page.svelte
  - maps
    - TS +page.server.ts
    - +page.svelte
  - signup
    - +page.svelte
    - SignupForm.svelte
- app.d.ts
- app.html

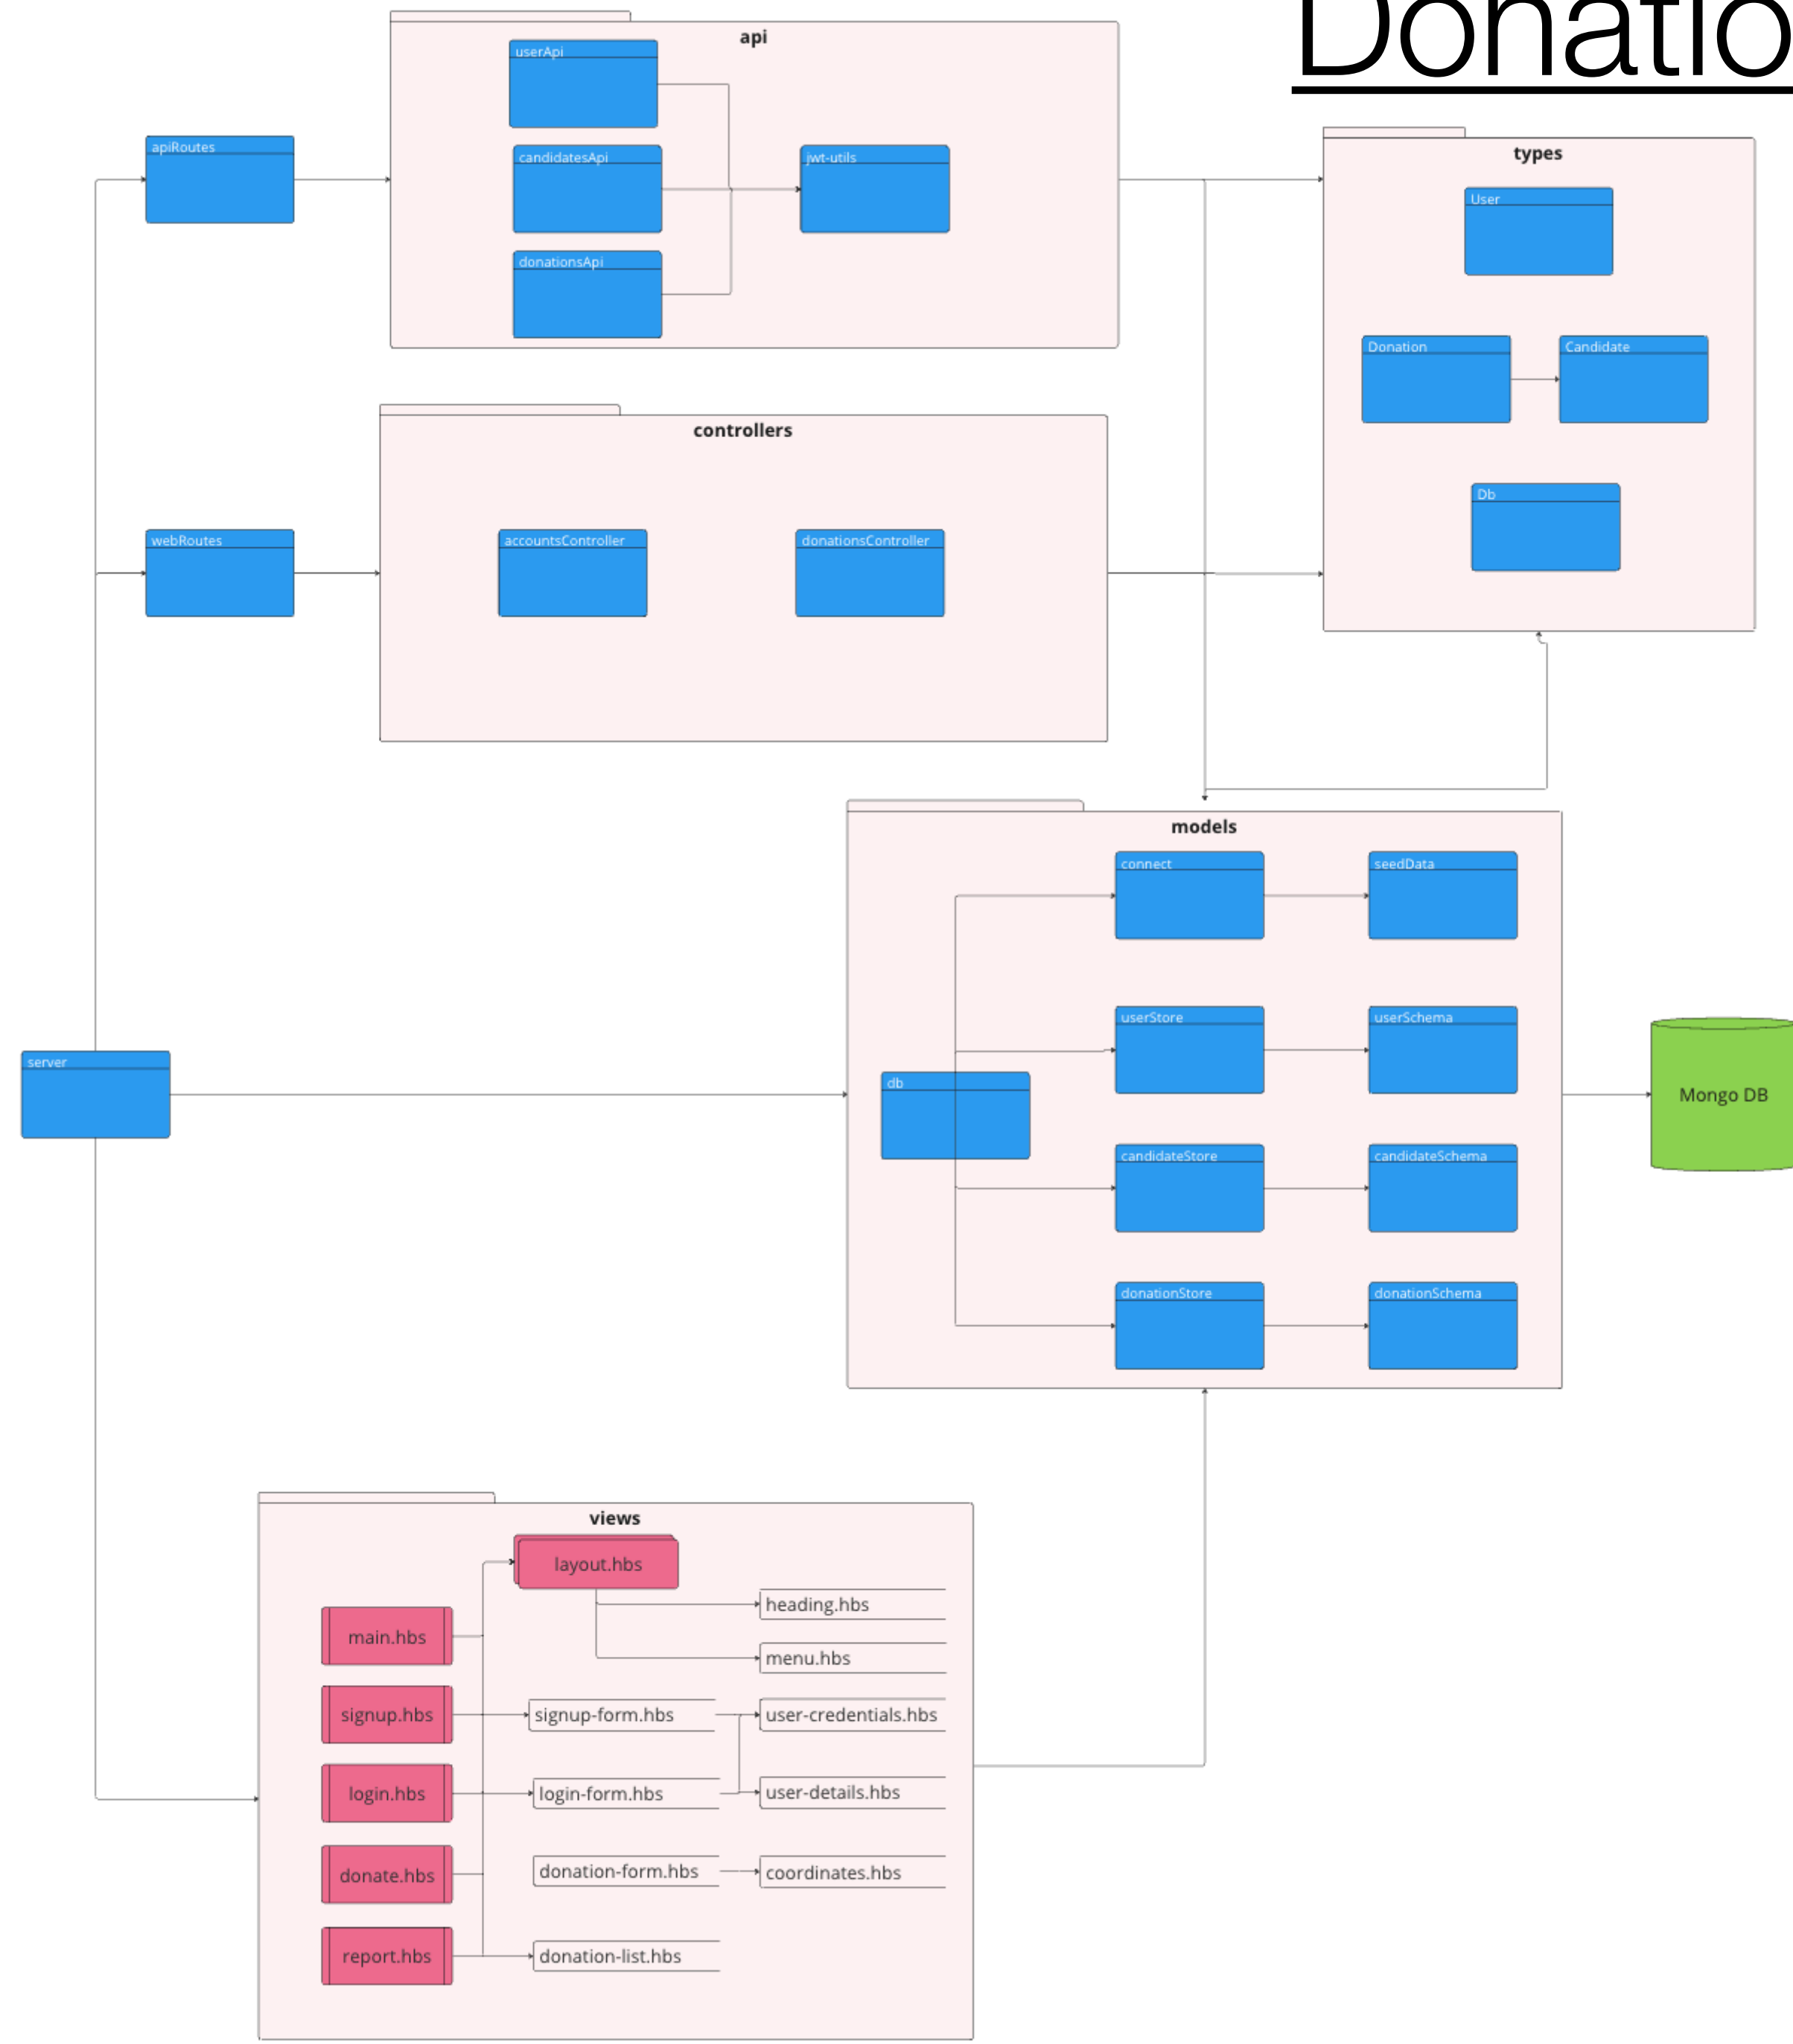

- src
  - lib
    - services
      - TS donation-service.ts
      - TS donation-utils.ts
    - types
      - TS donation-types.ts
    - ui
      - Card.svelte
      - Coordinates.svelte
      - DonationList.svelte
      - Heading.svelte
      - LeafletMap.svelte
      - Menu.svelte
      - Message.svelte
      - SplashScreen.svelte
      - UserCredentials.svelte
      - UserDetails.svelte
      - TS stores.ts

# Donation-Hapi Application Structure

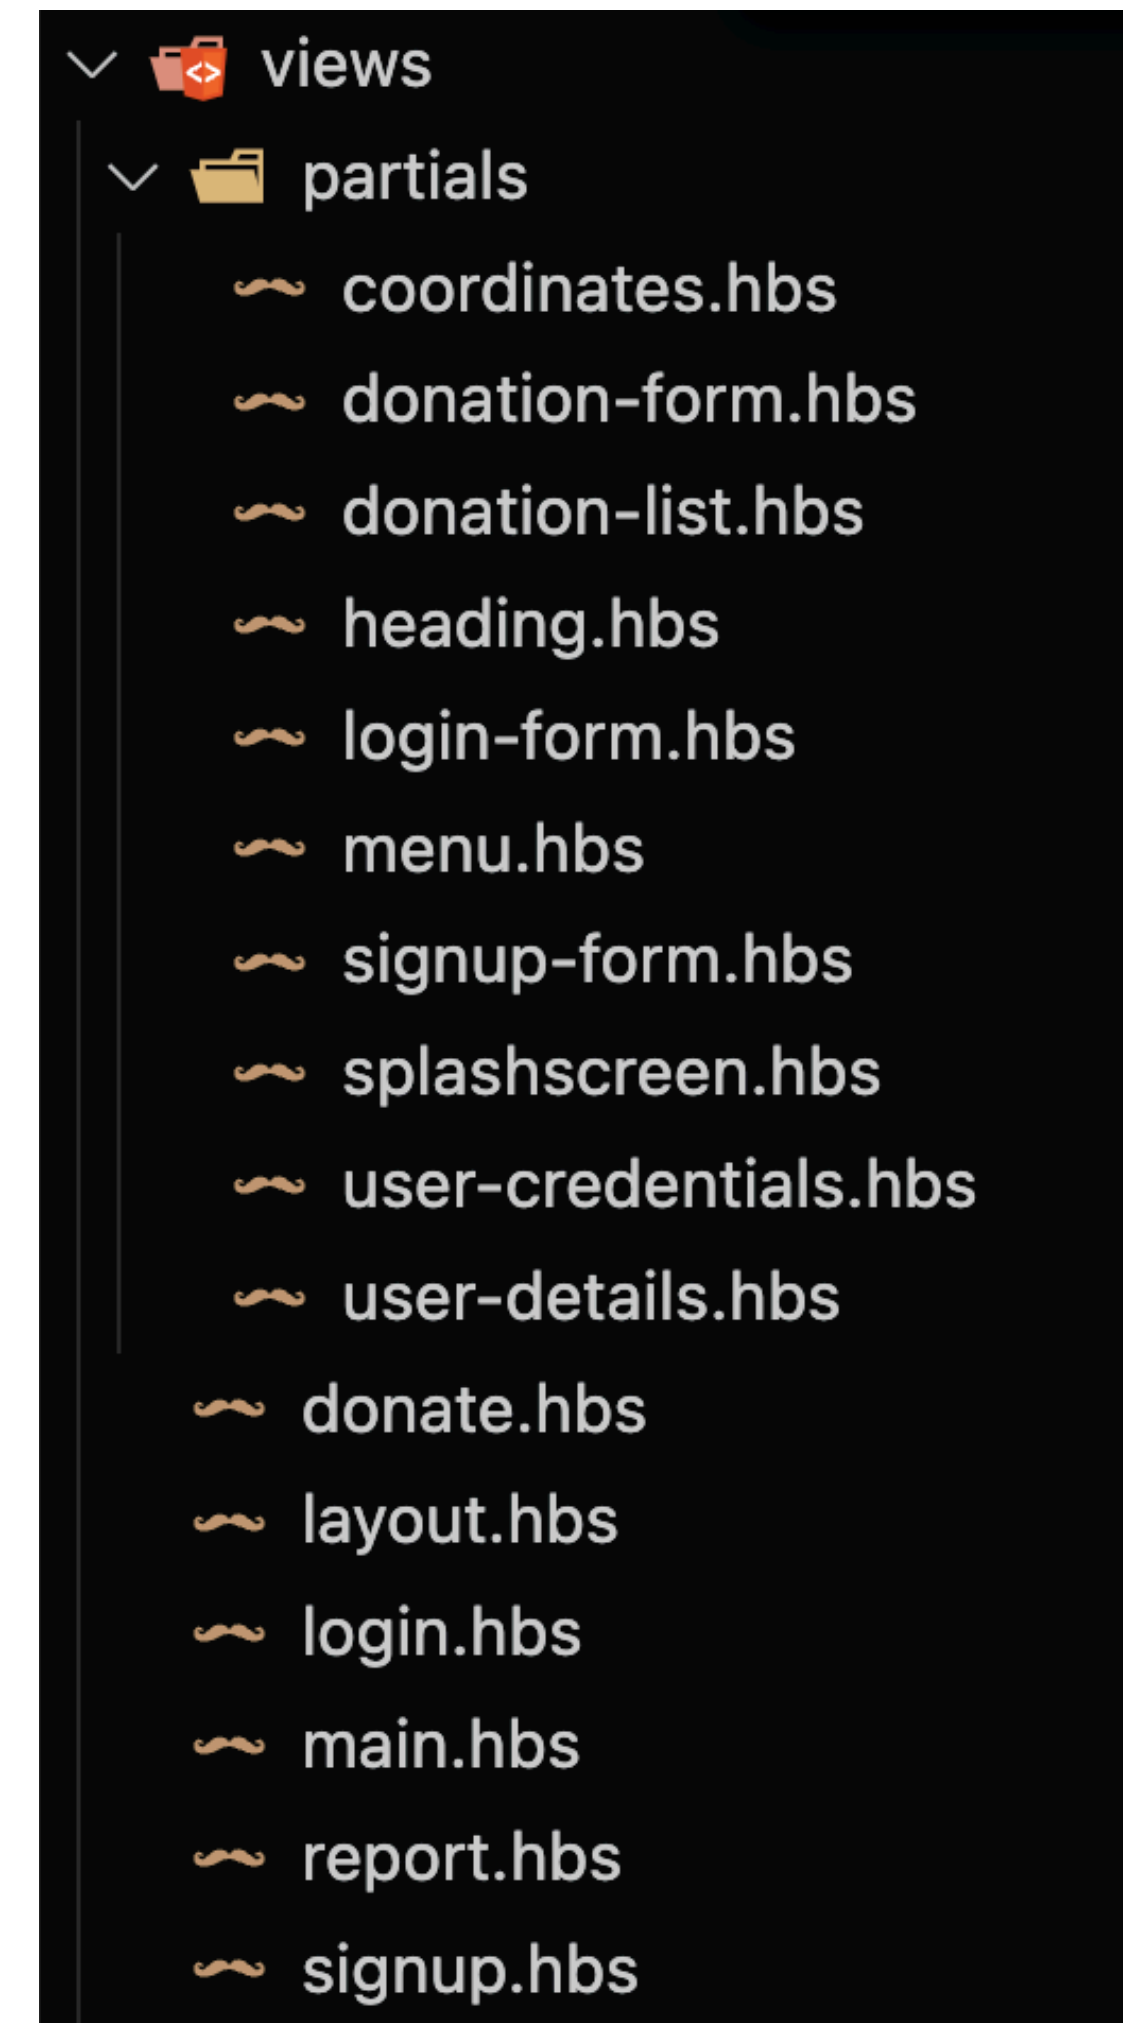

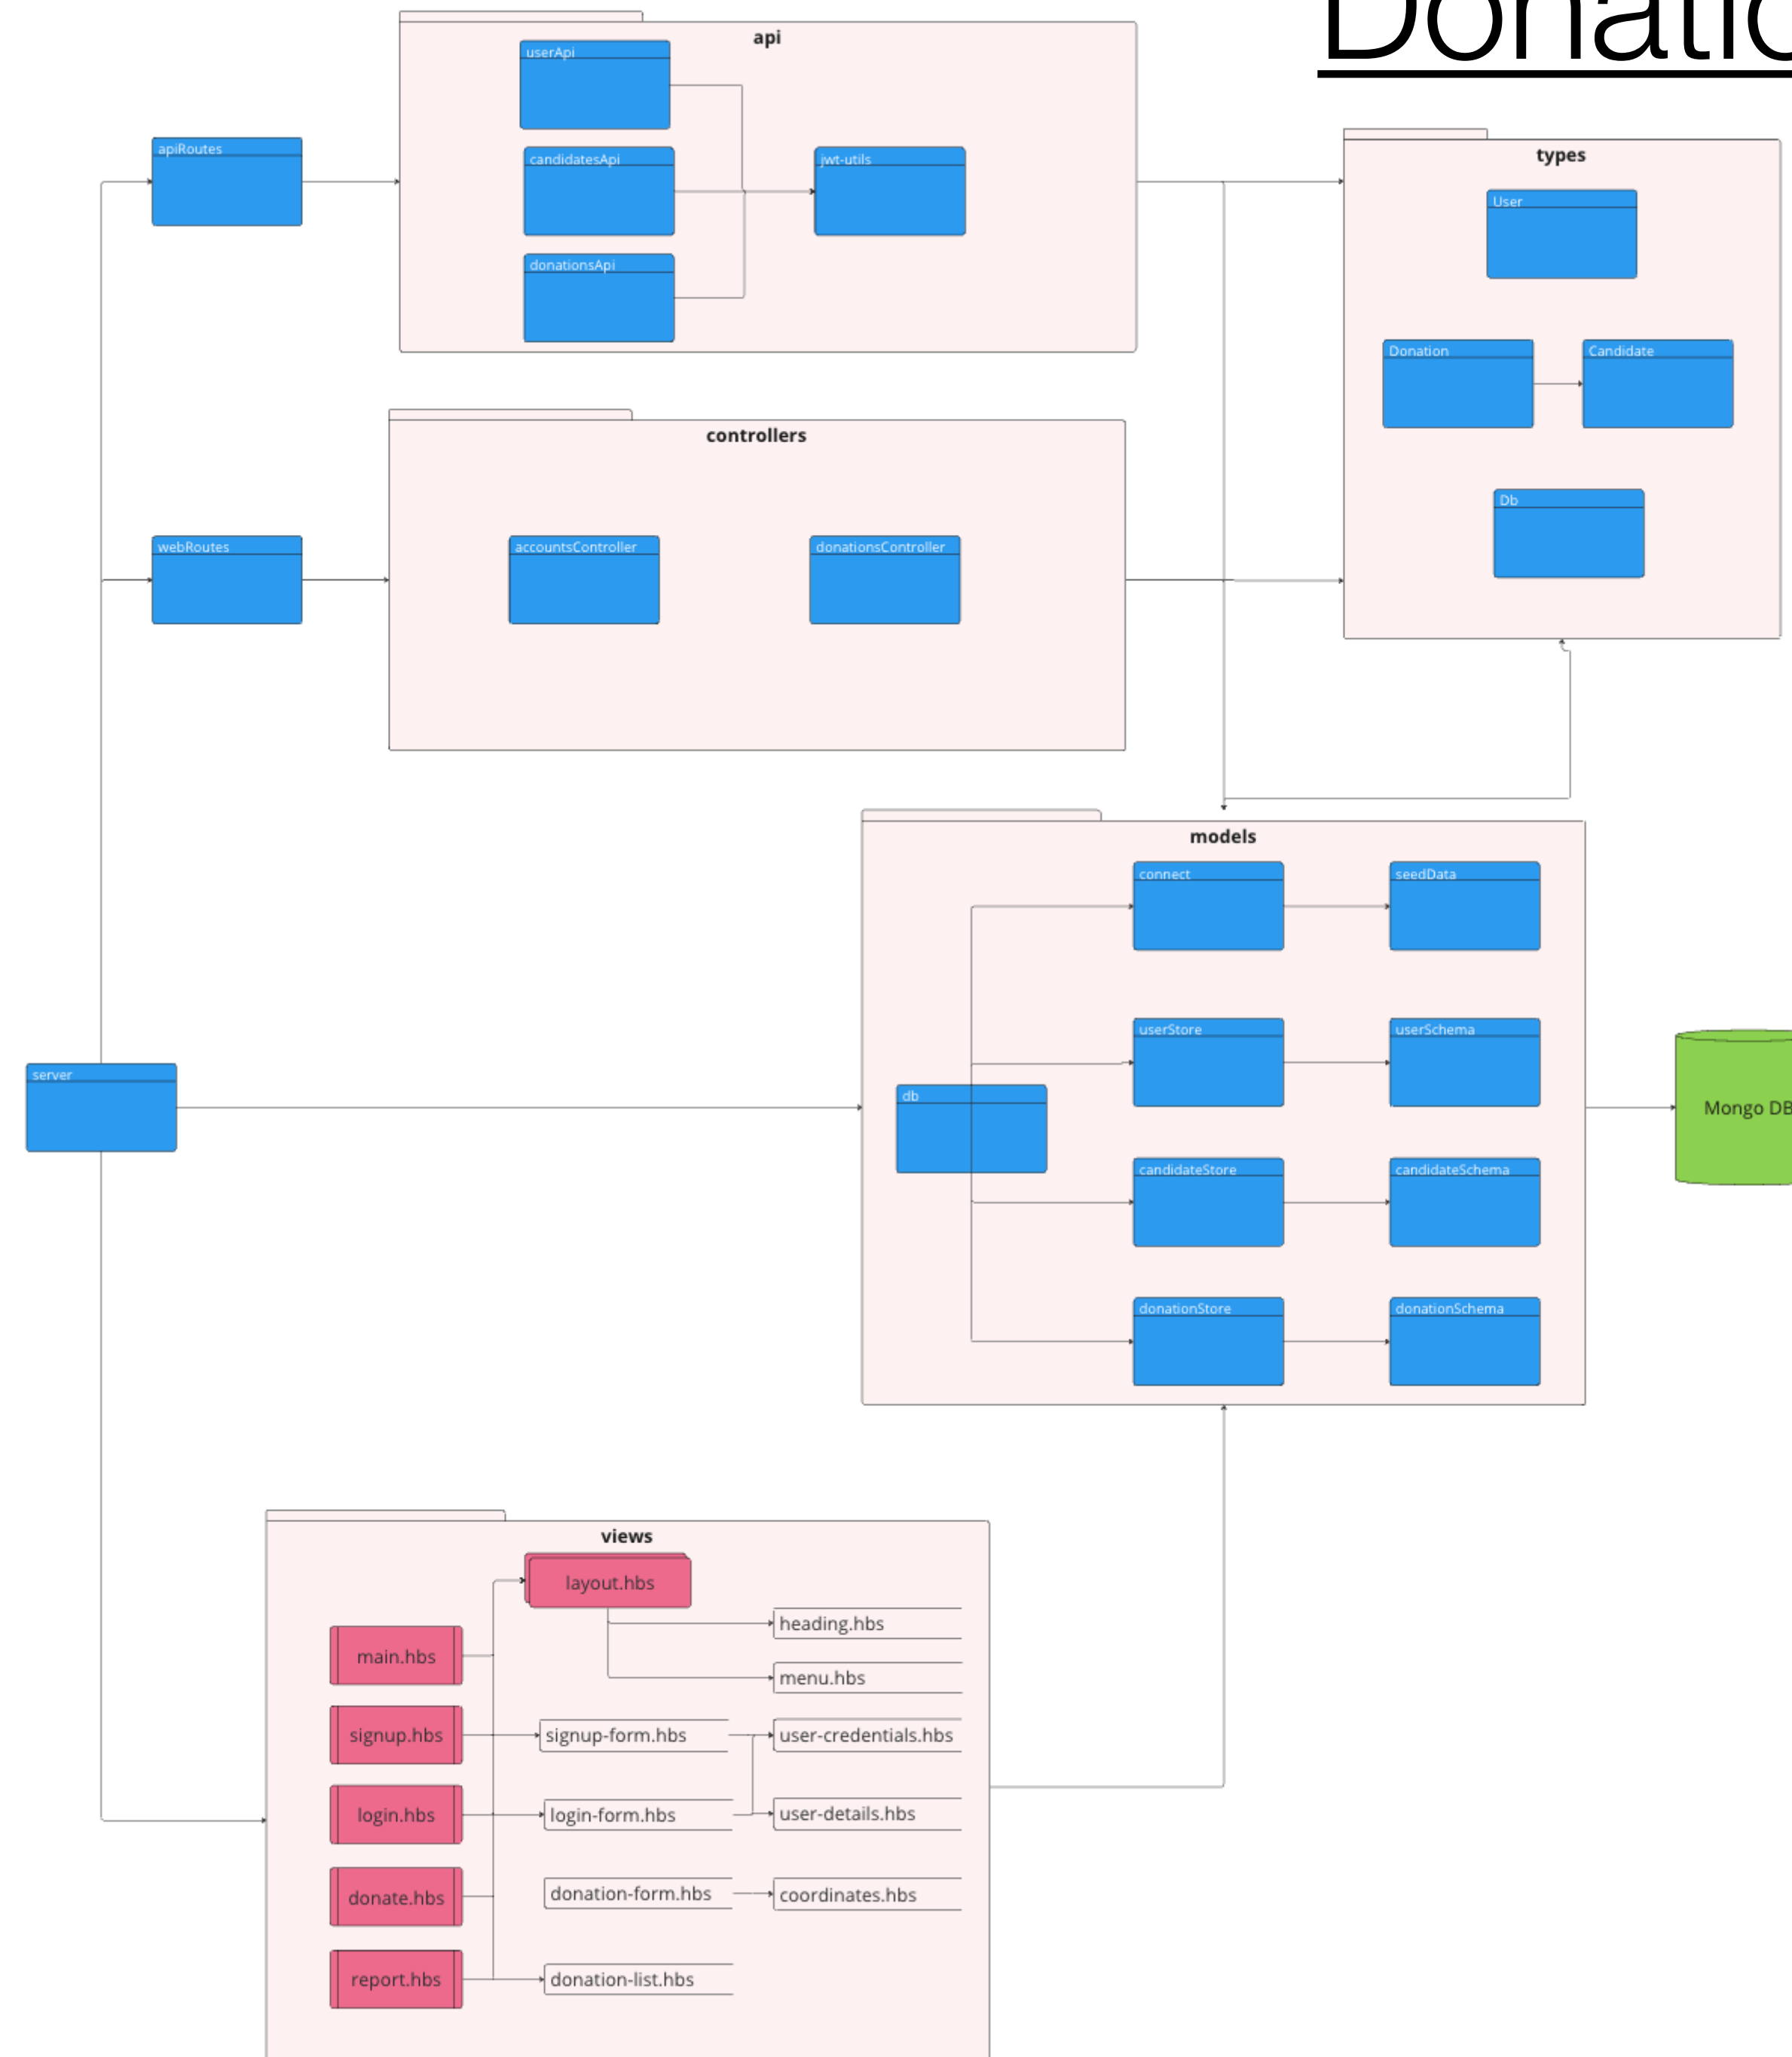

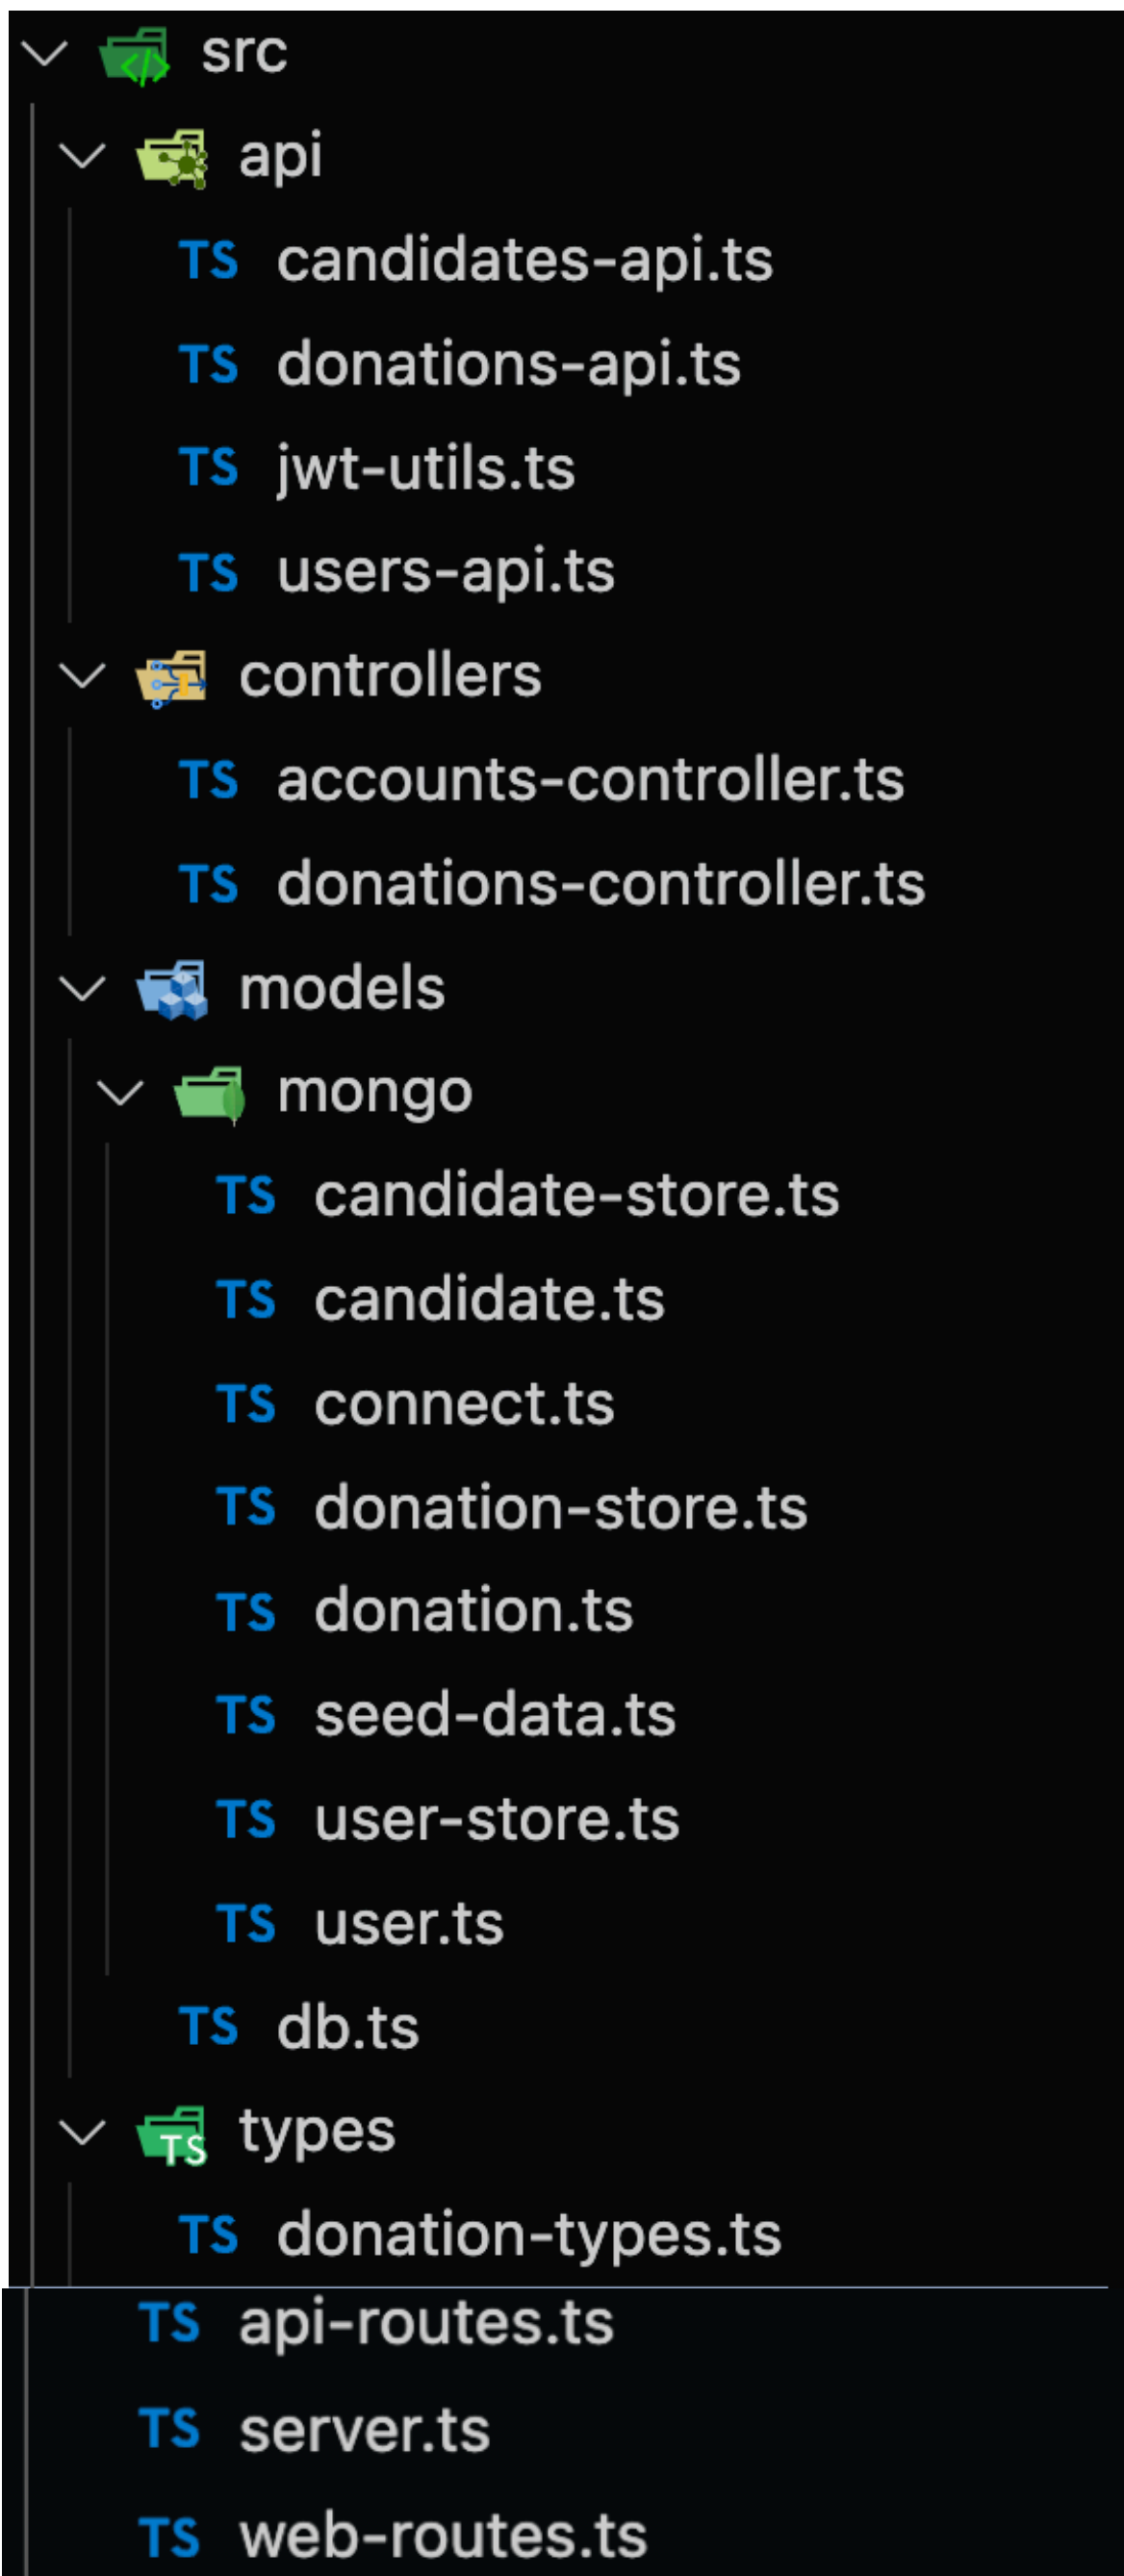

# Donation-hapi-04-api

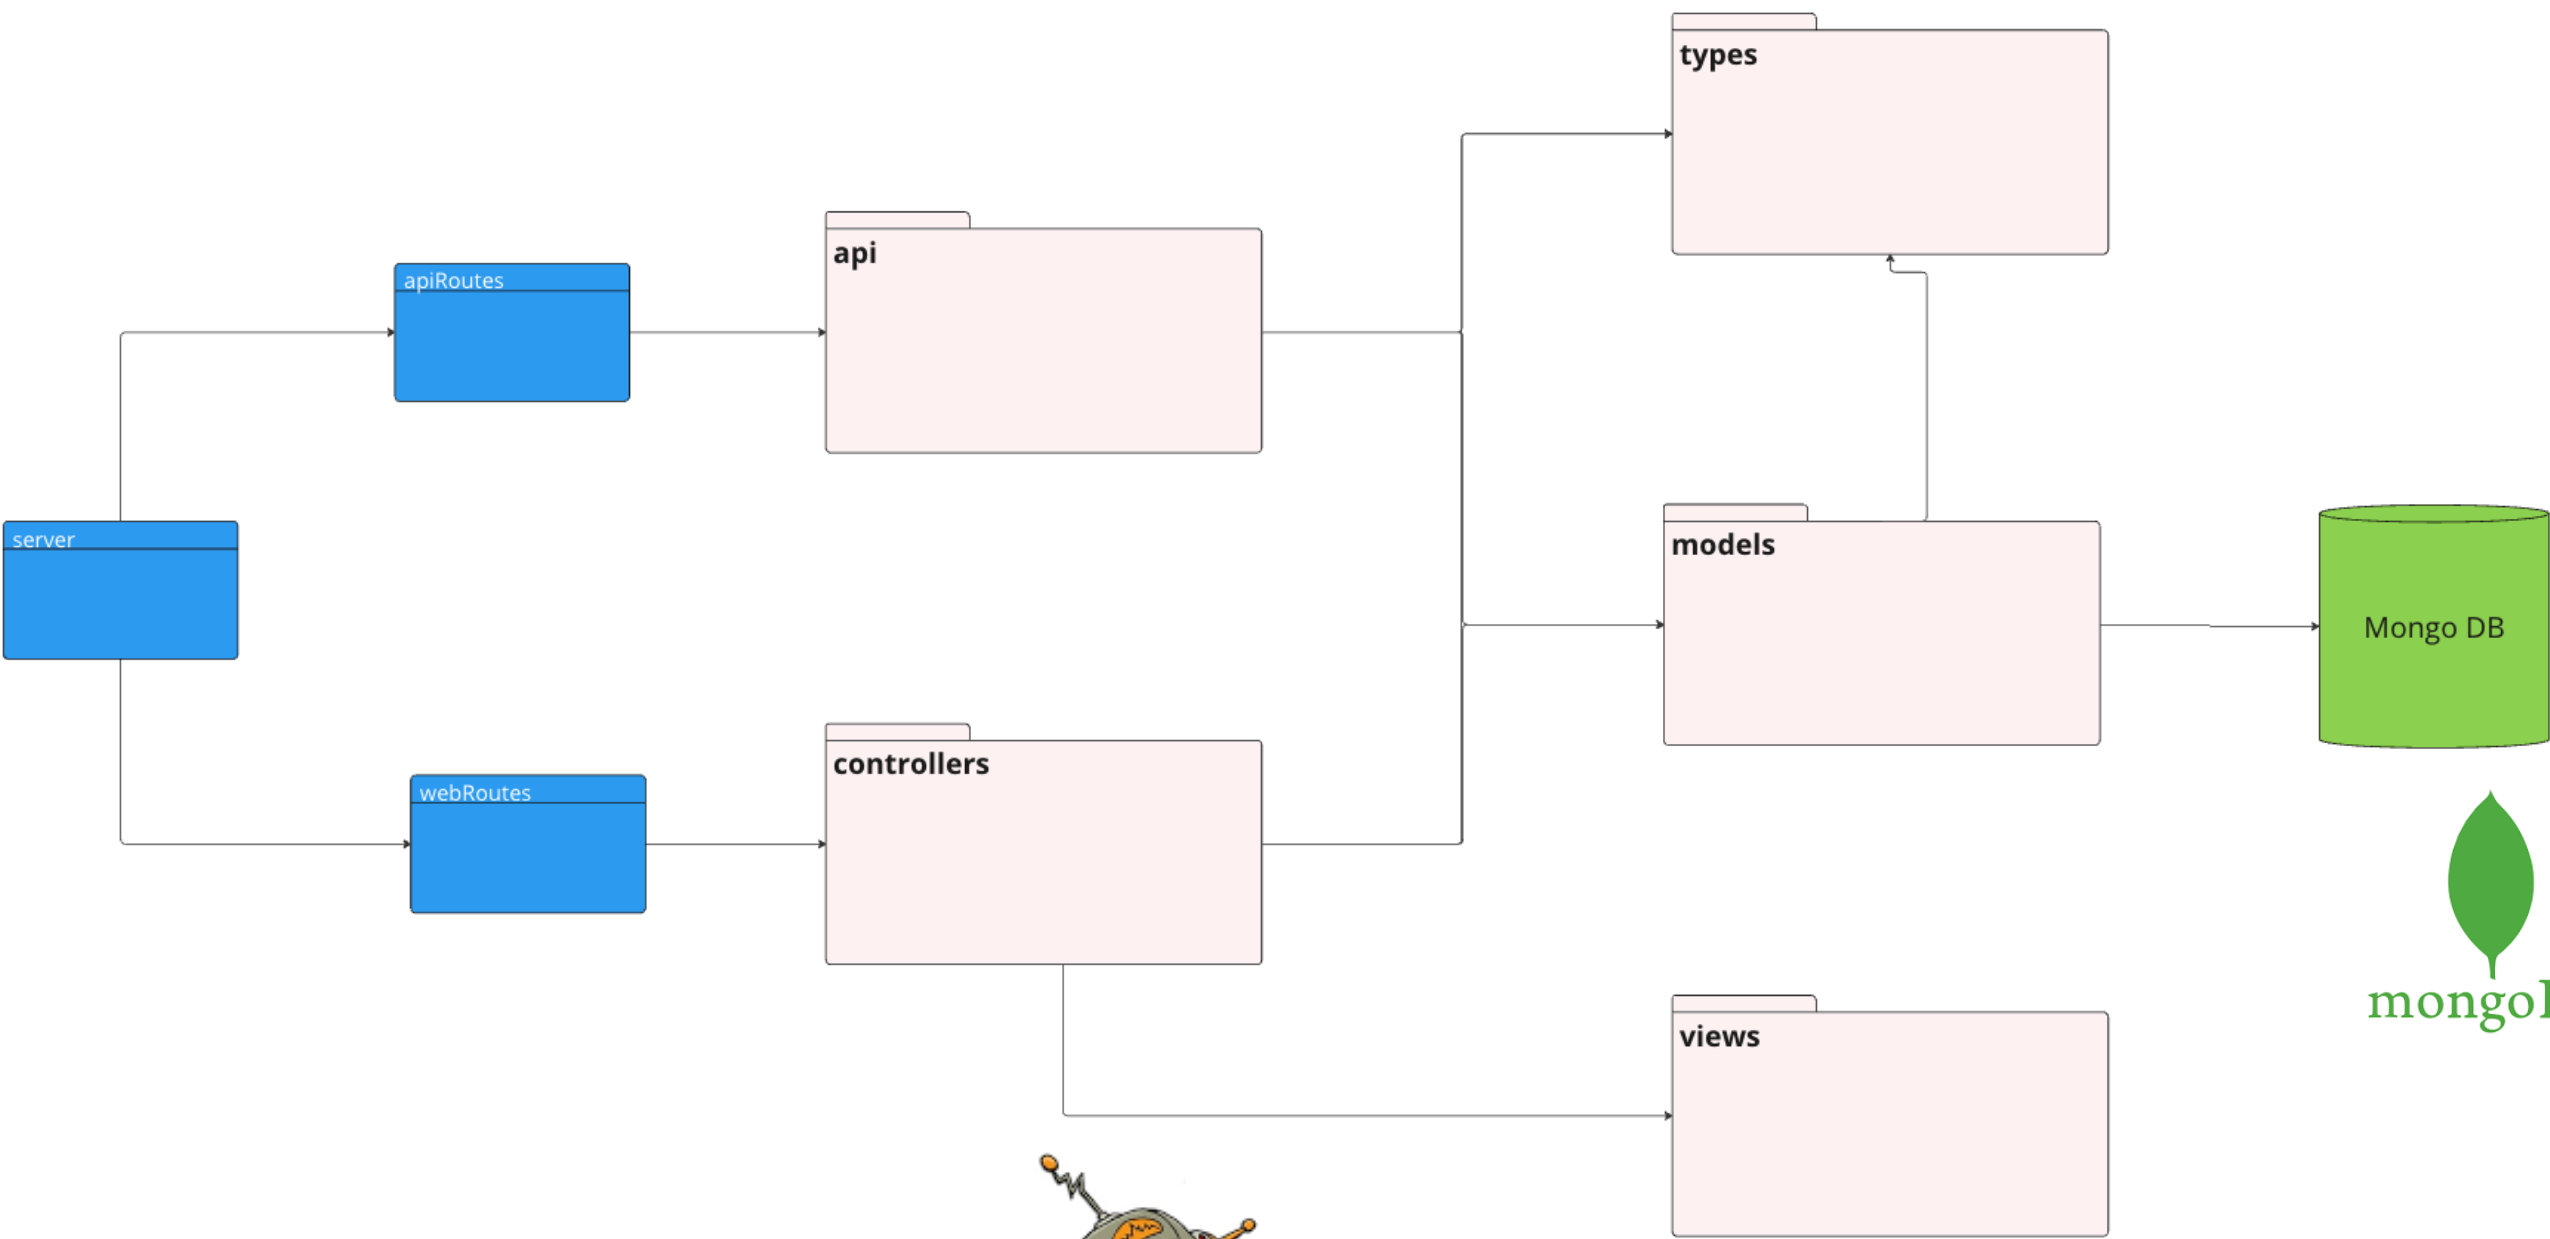

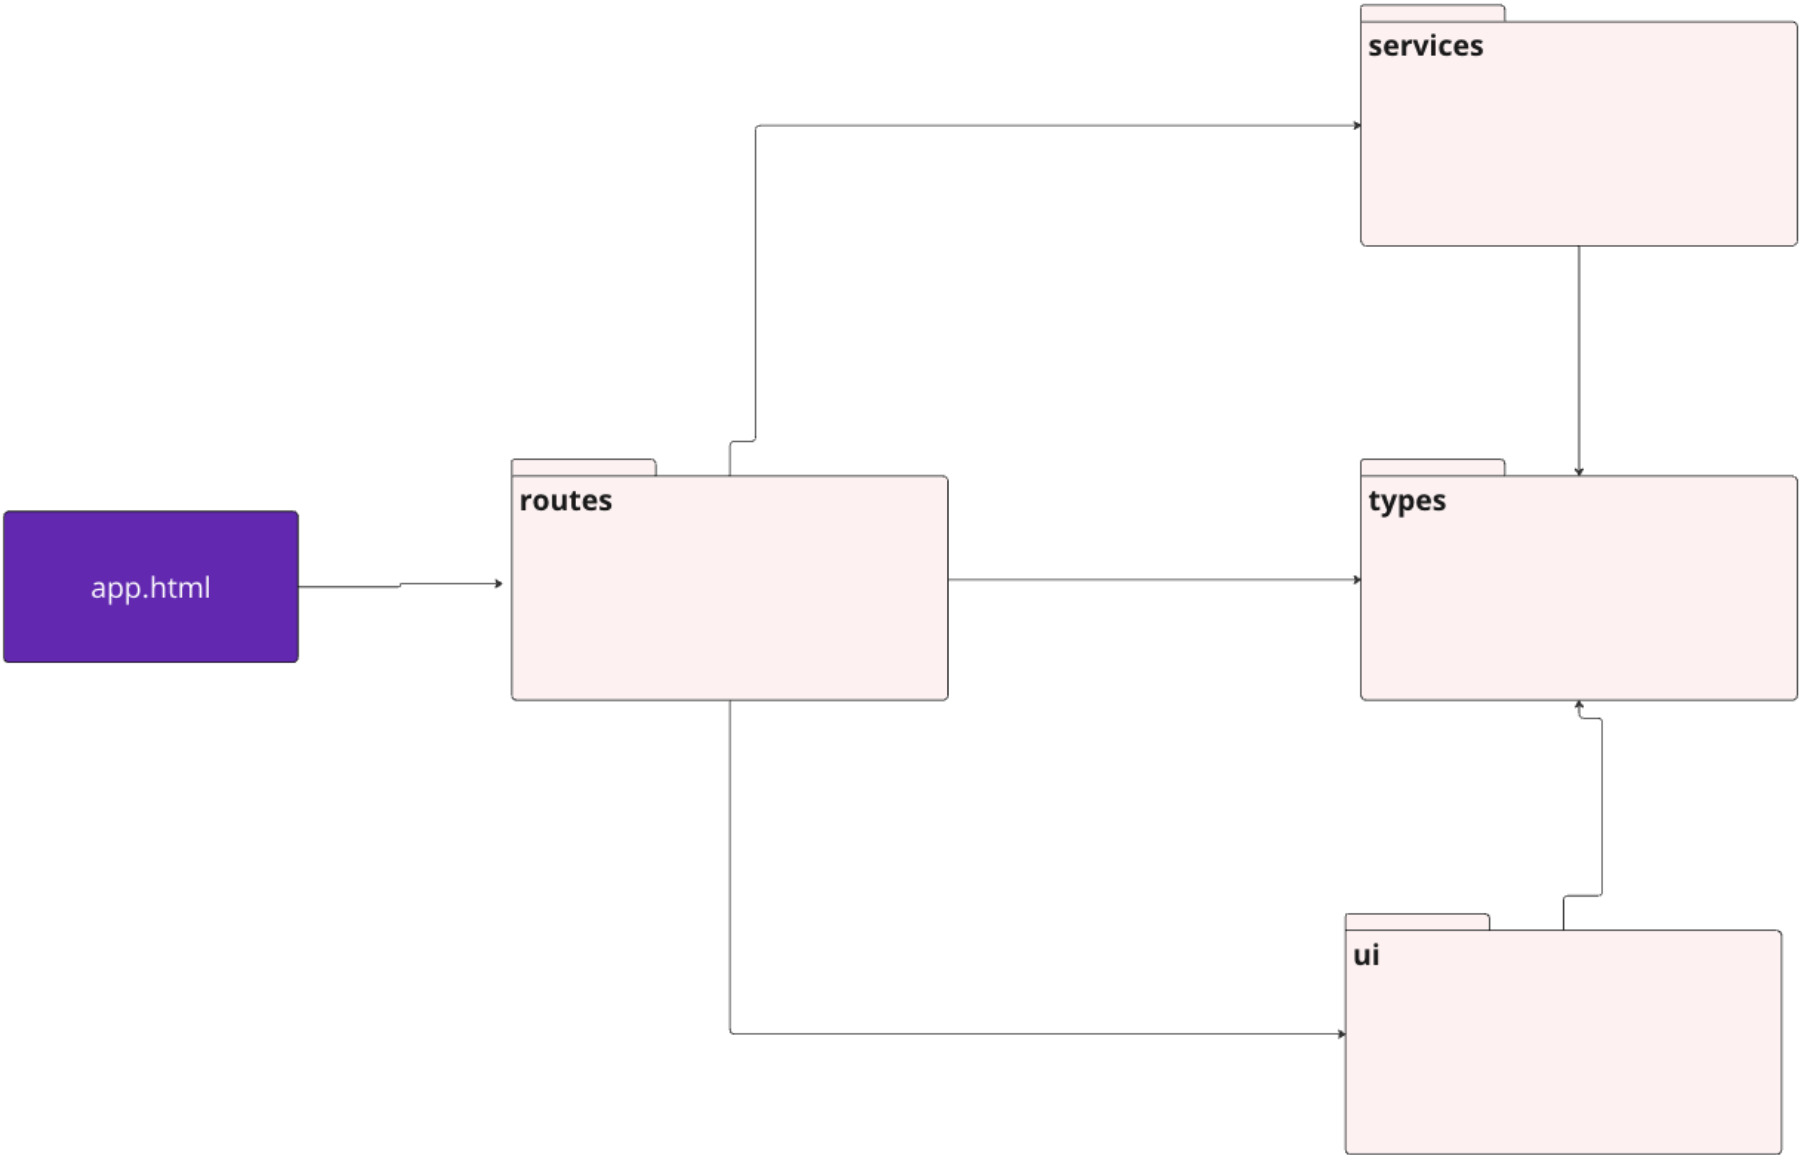

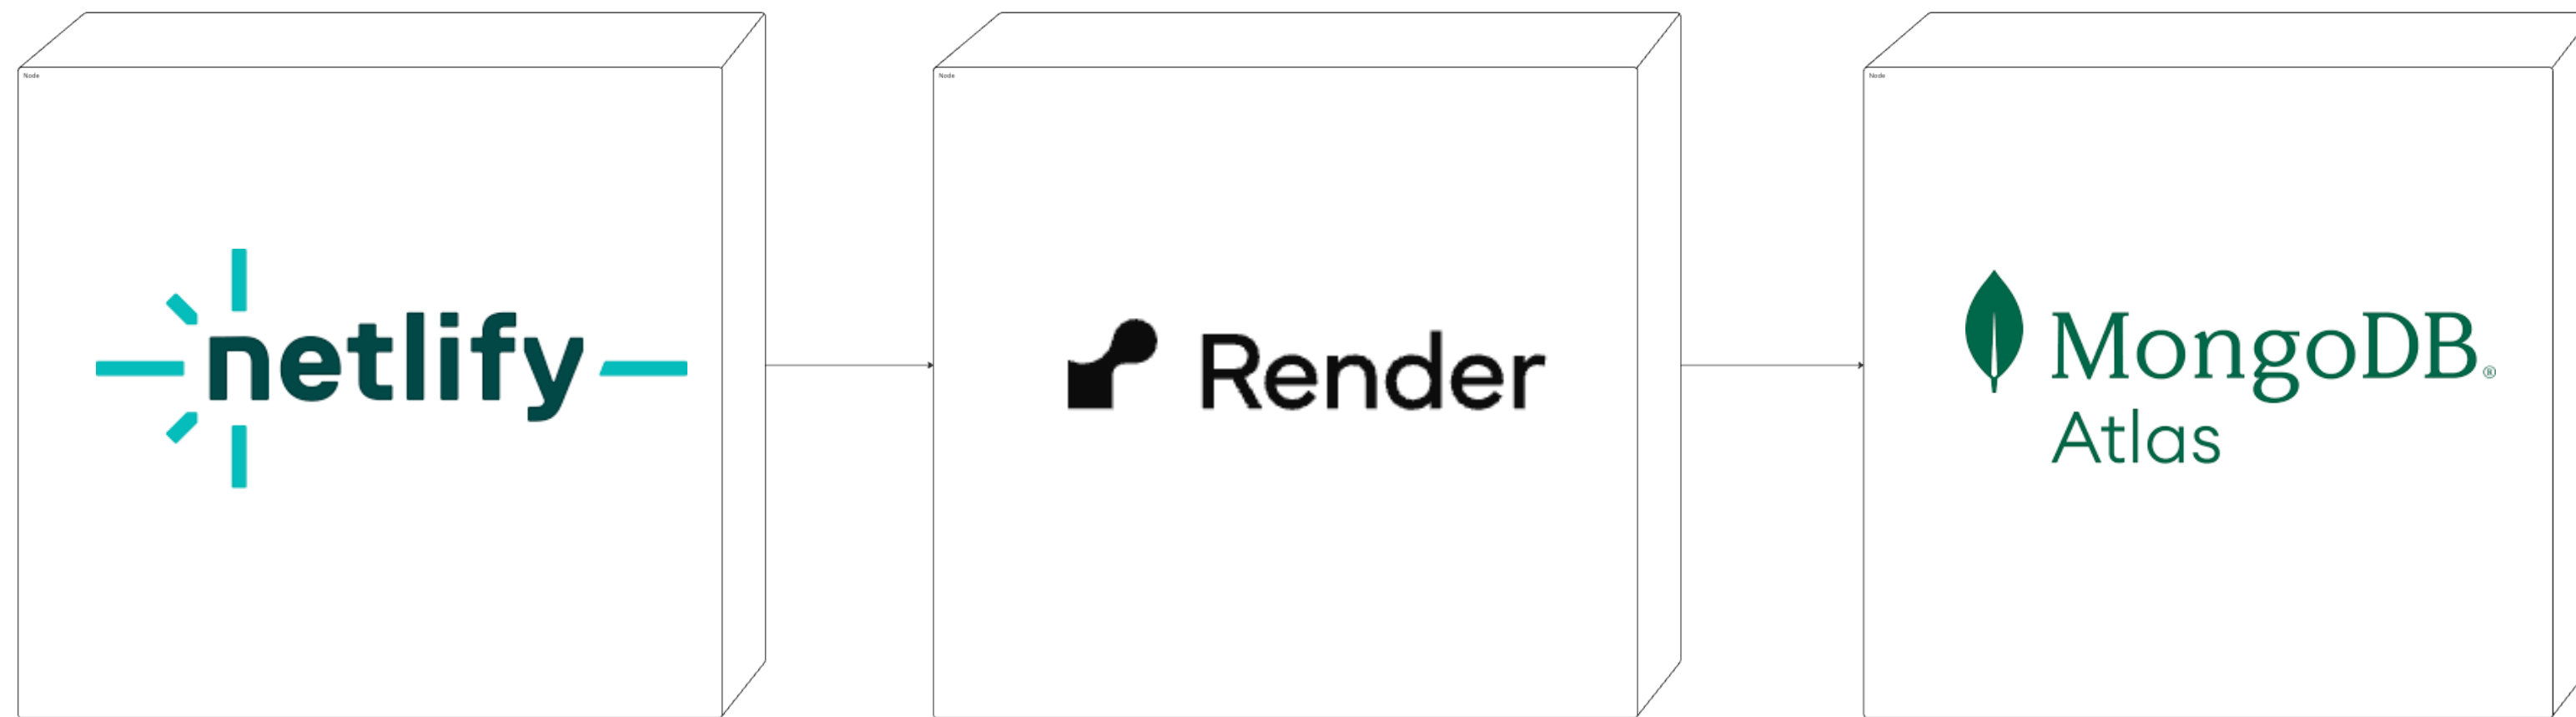

# Donation-hapi-04-api

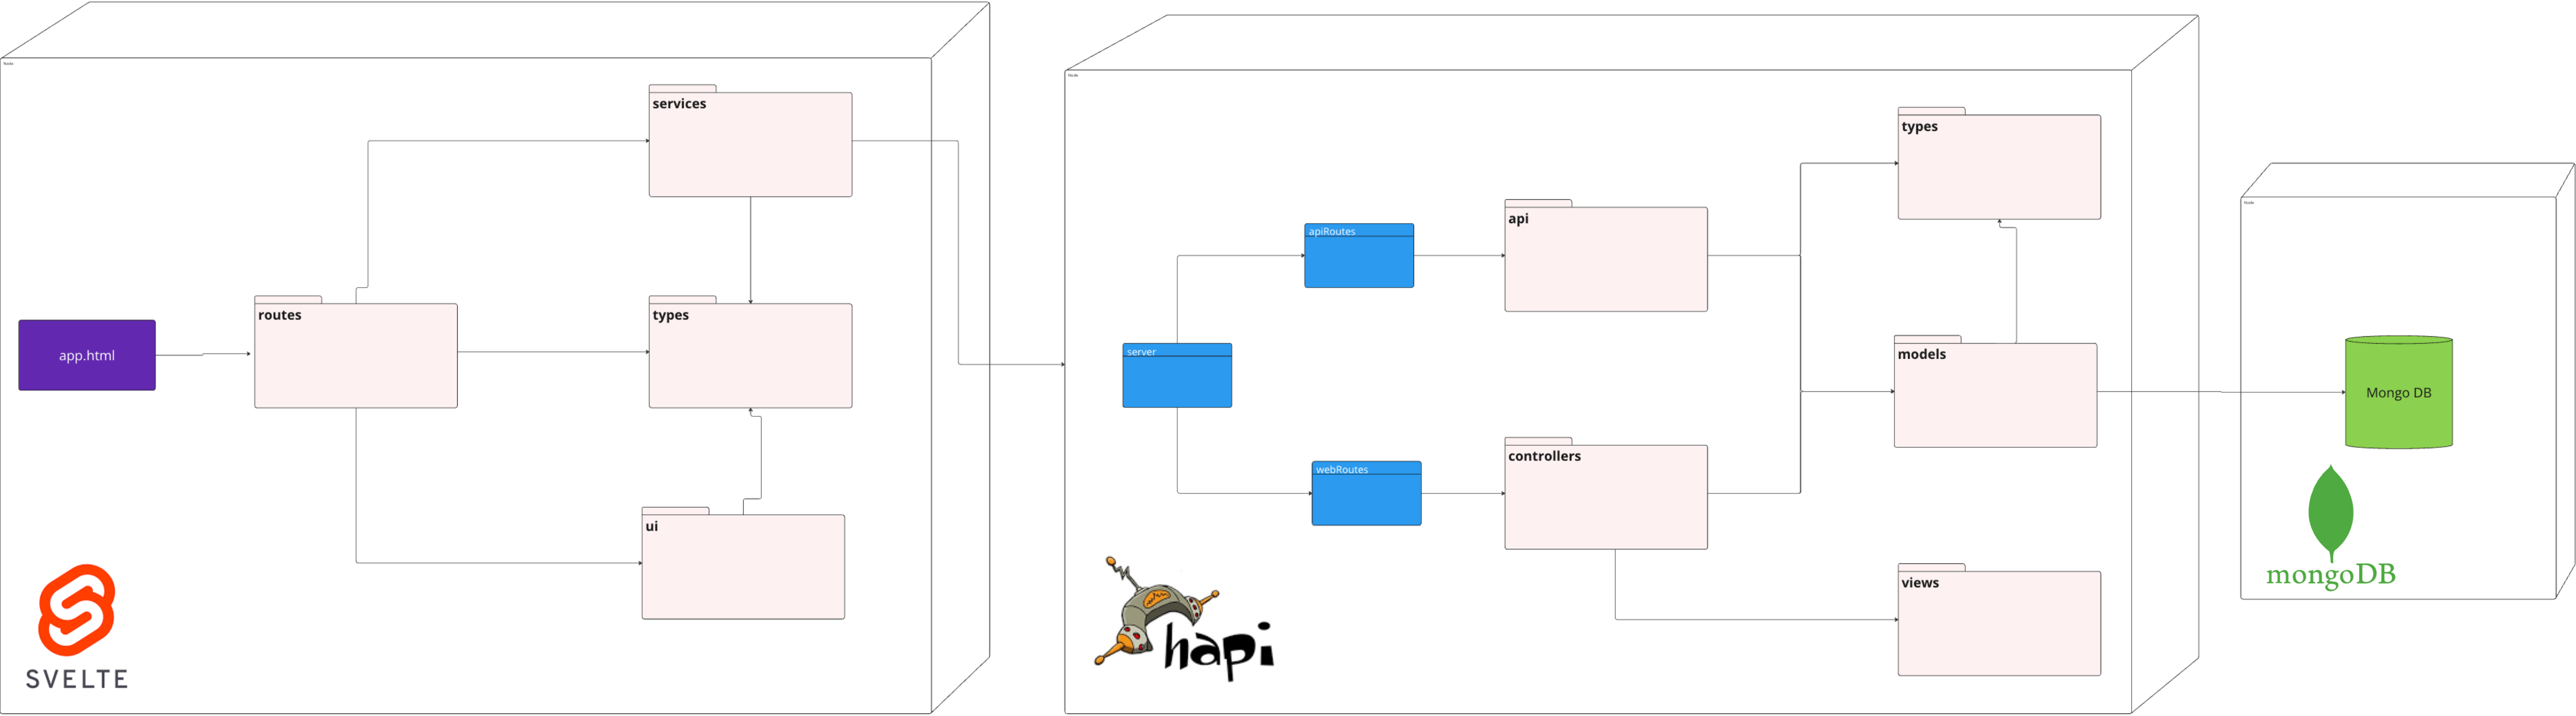

# Donation Architecture

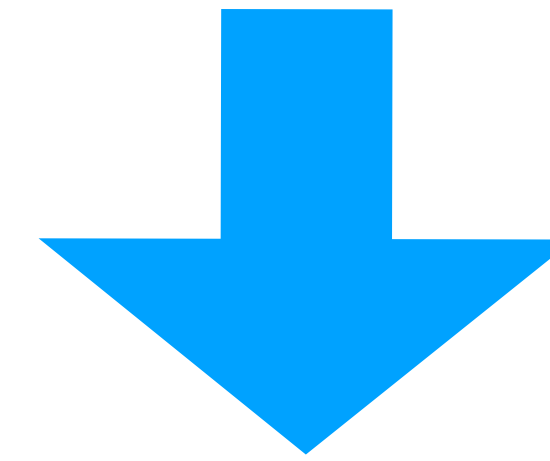

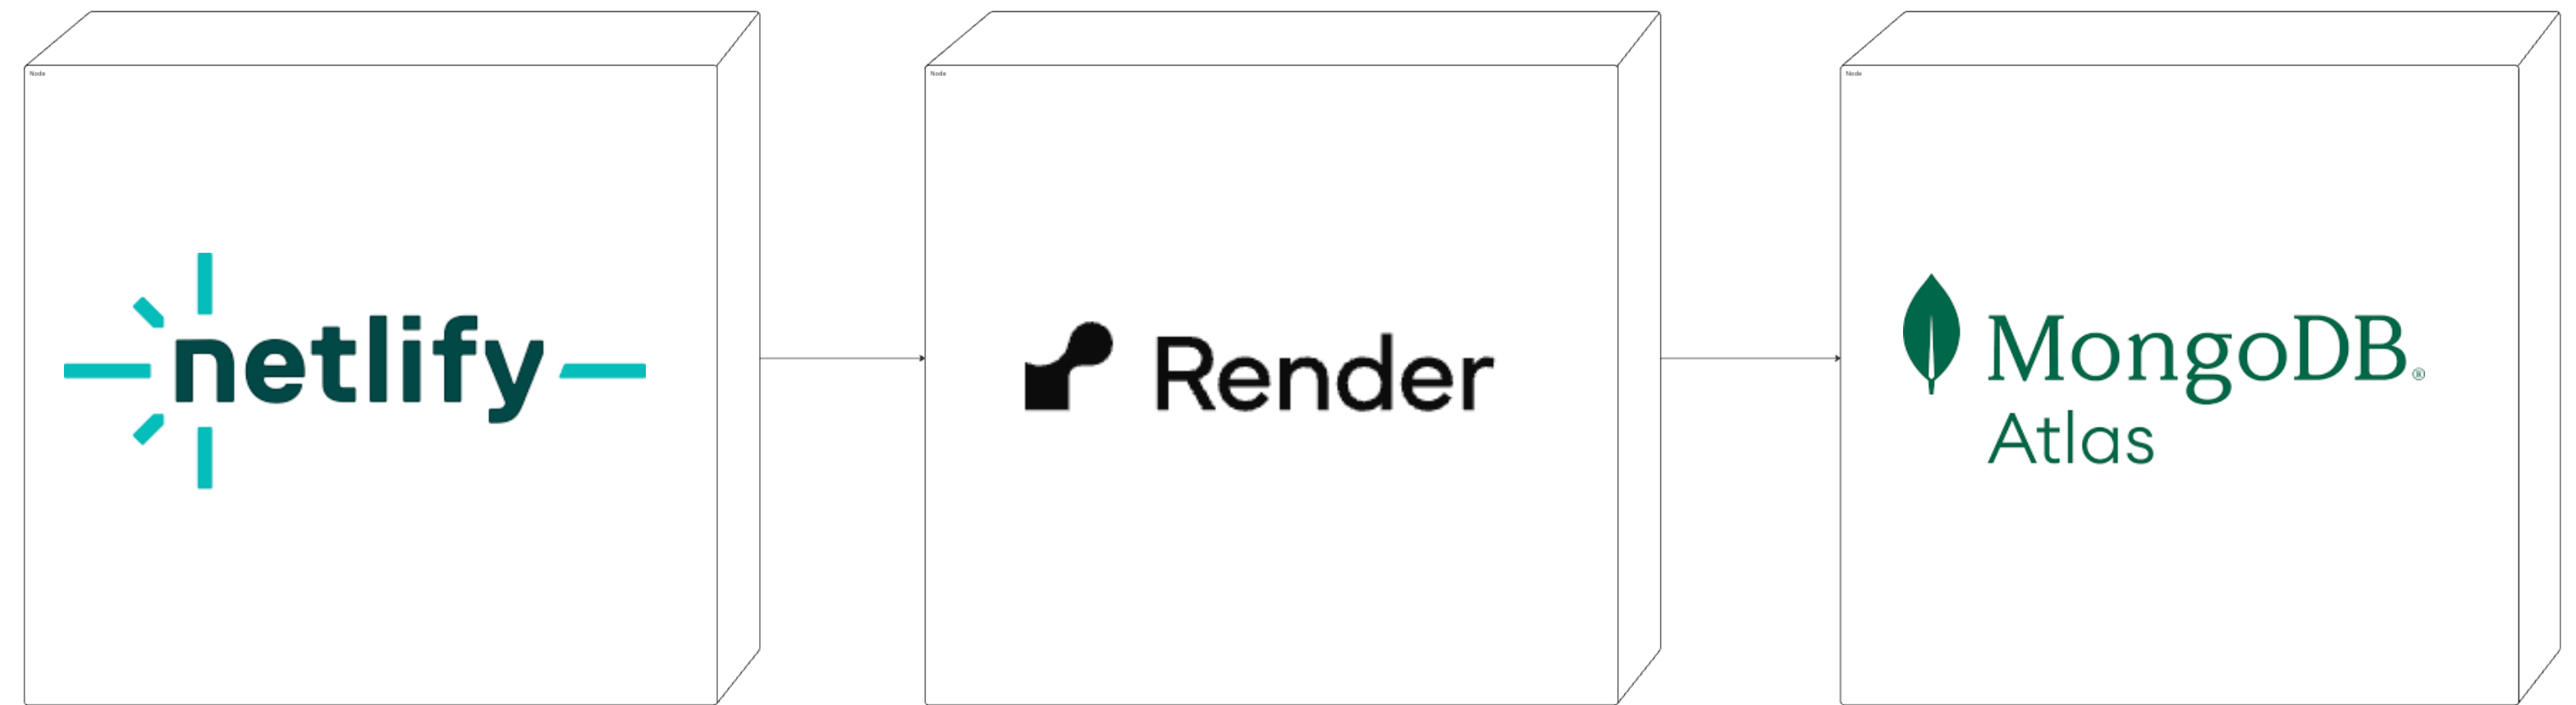

# Donation Deployment

# Donation Deployment

## Full Stack Architecture

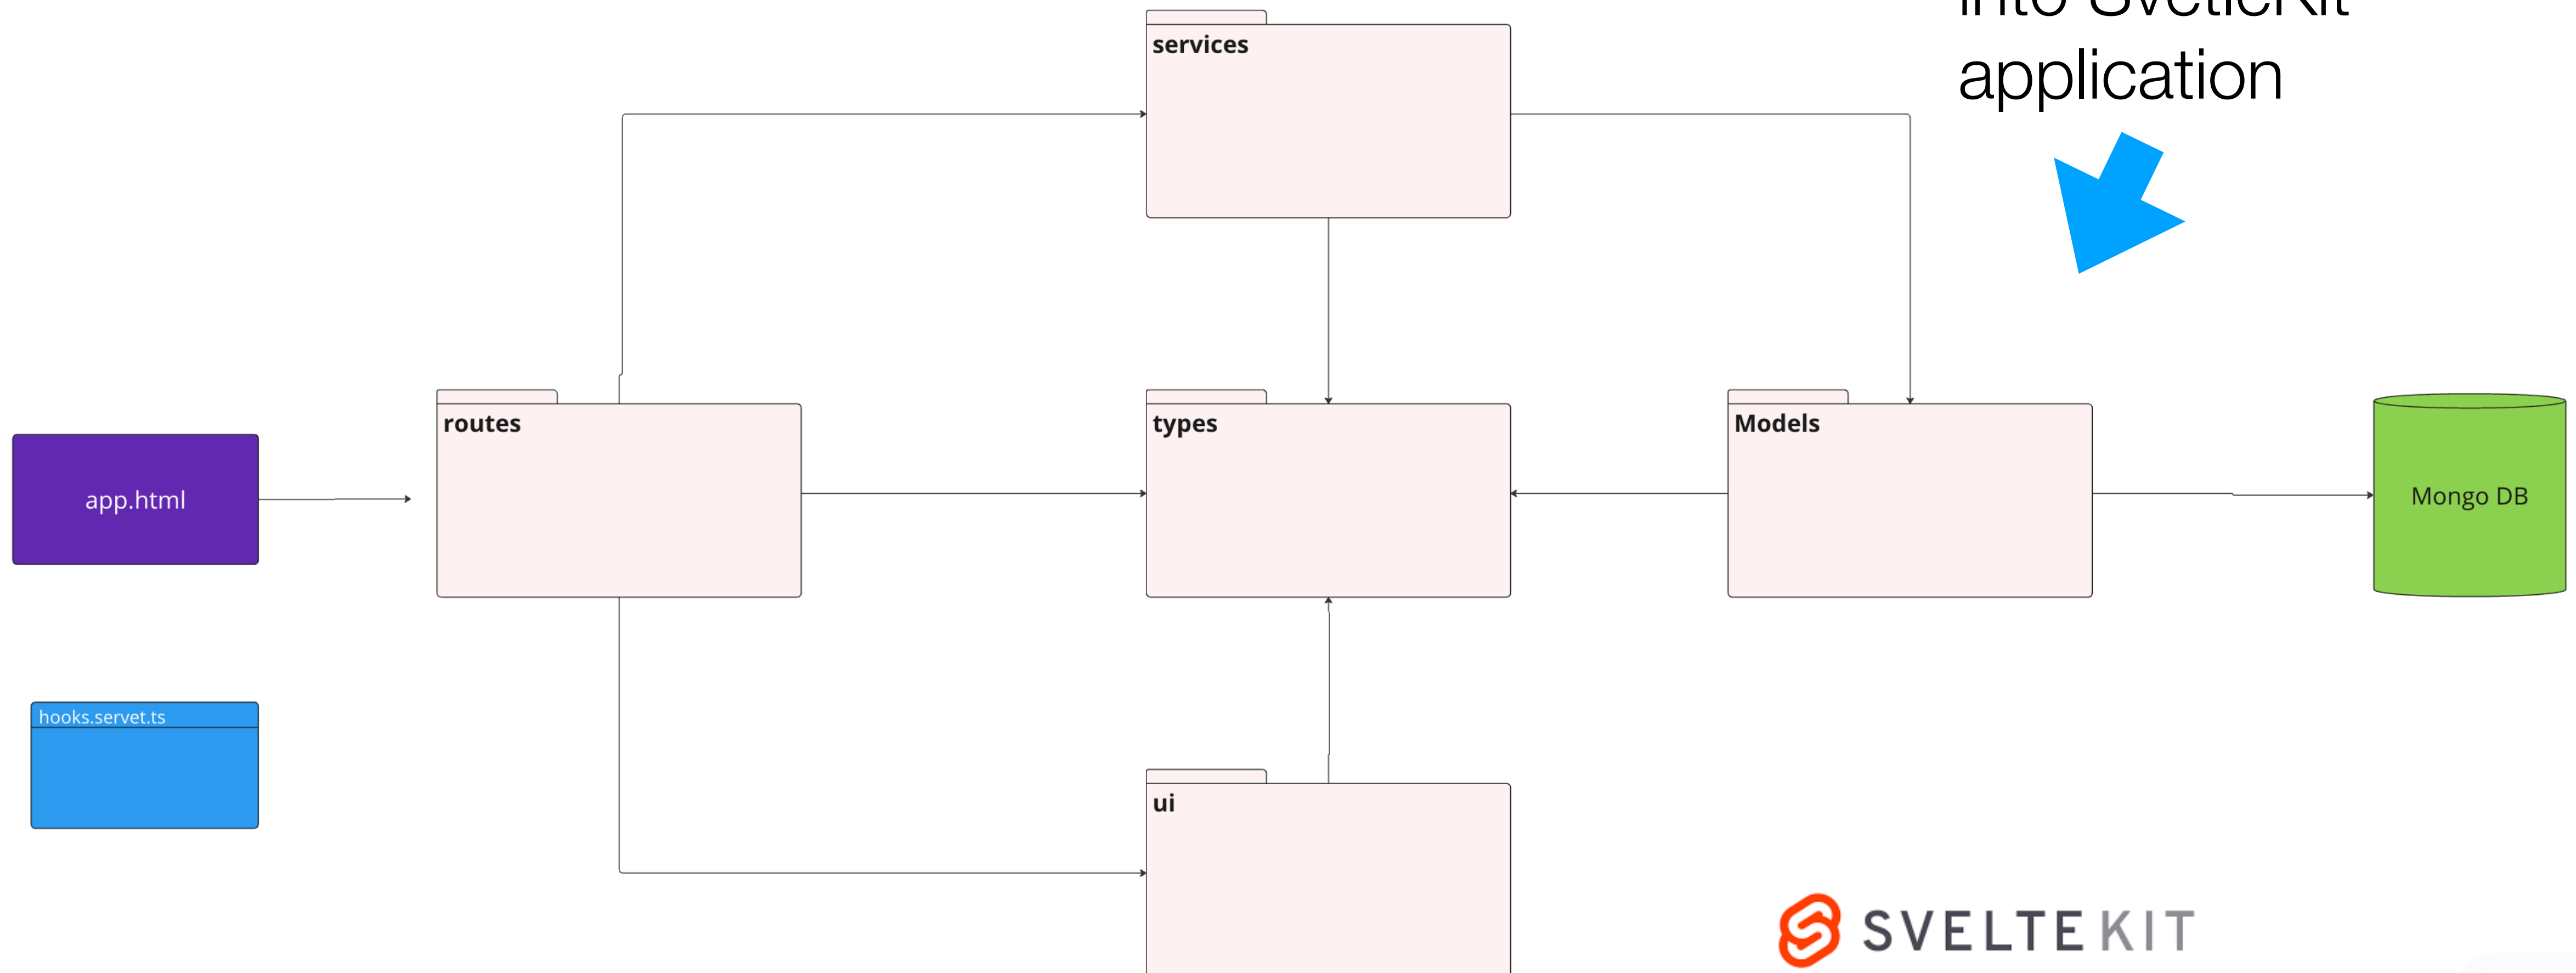

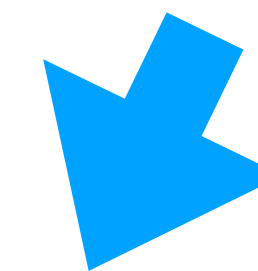

- Reconsider role of donation-hapi Application
- Directly integrate model access into donation-svelte

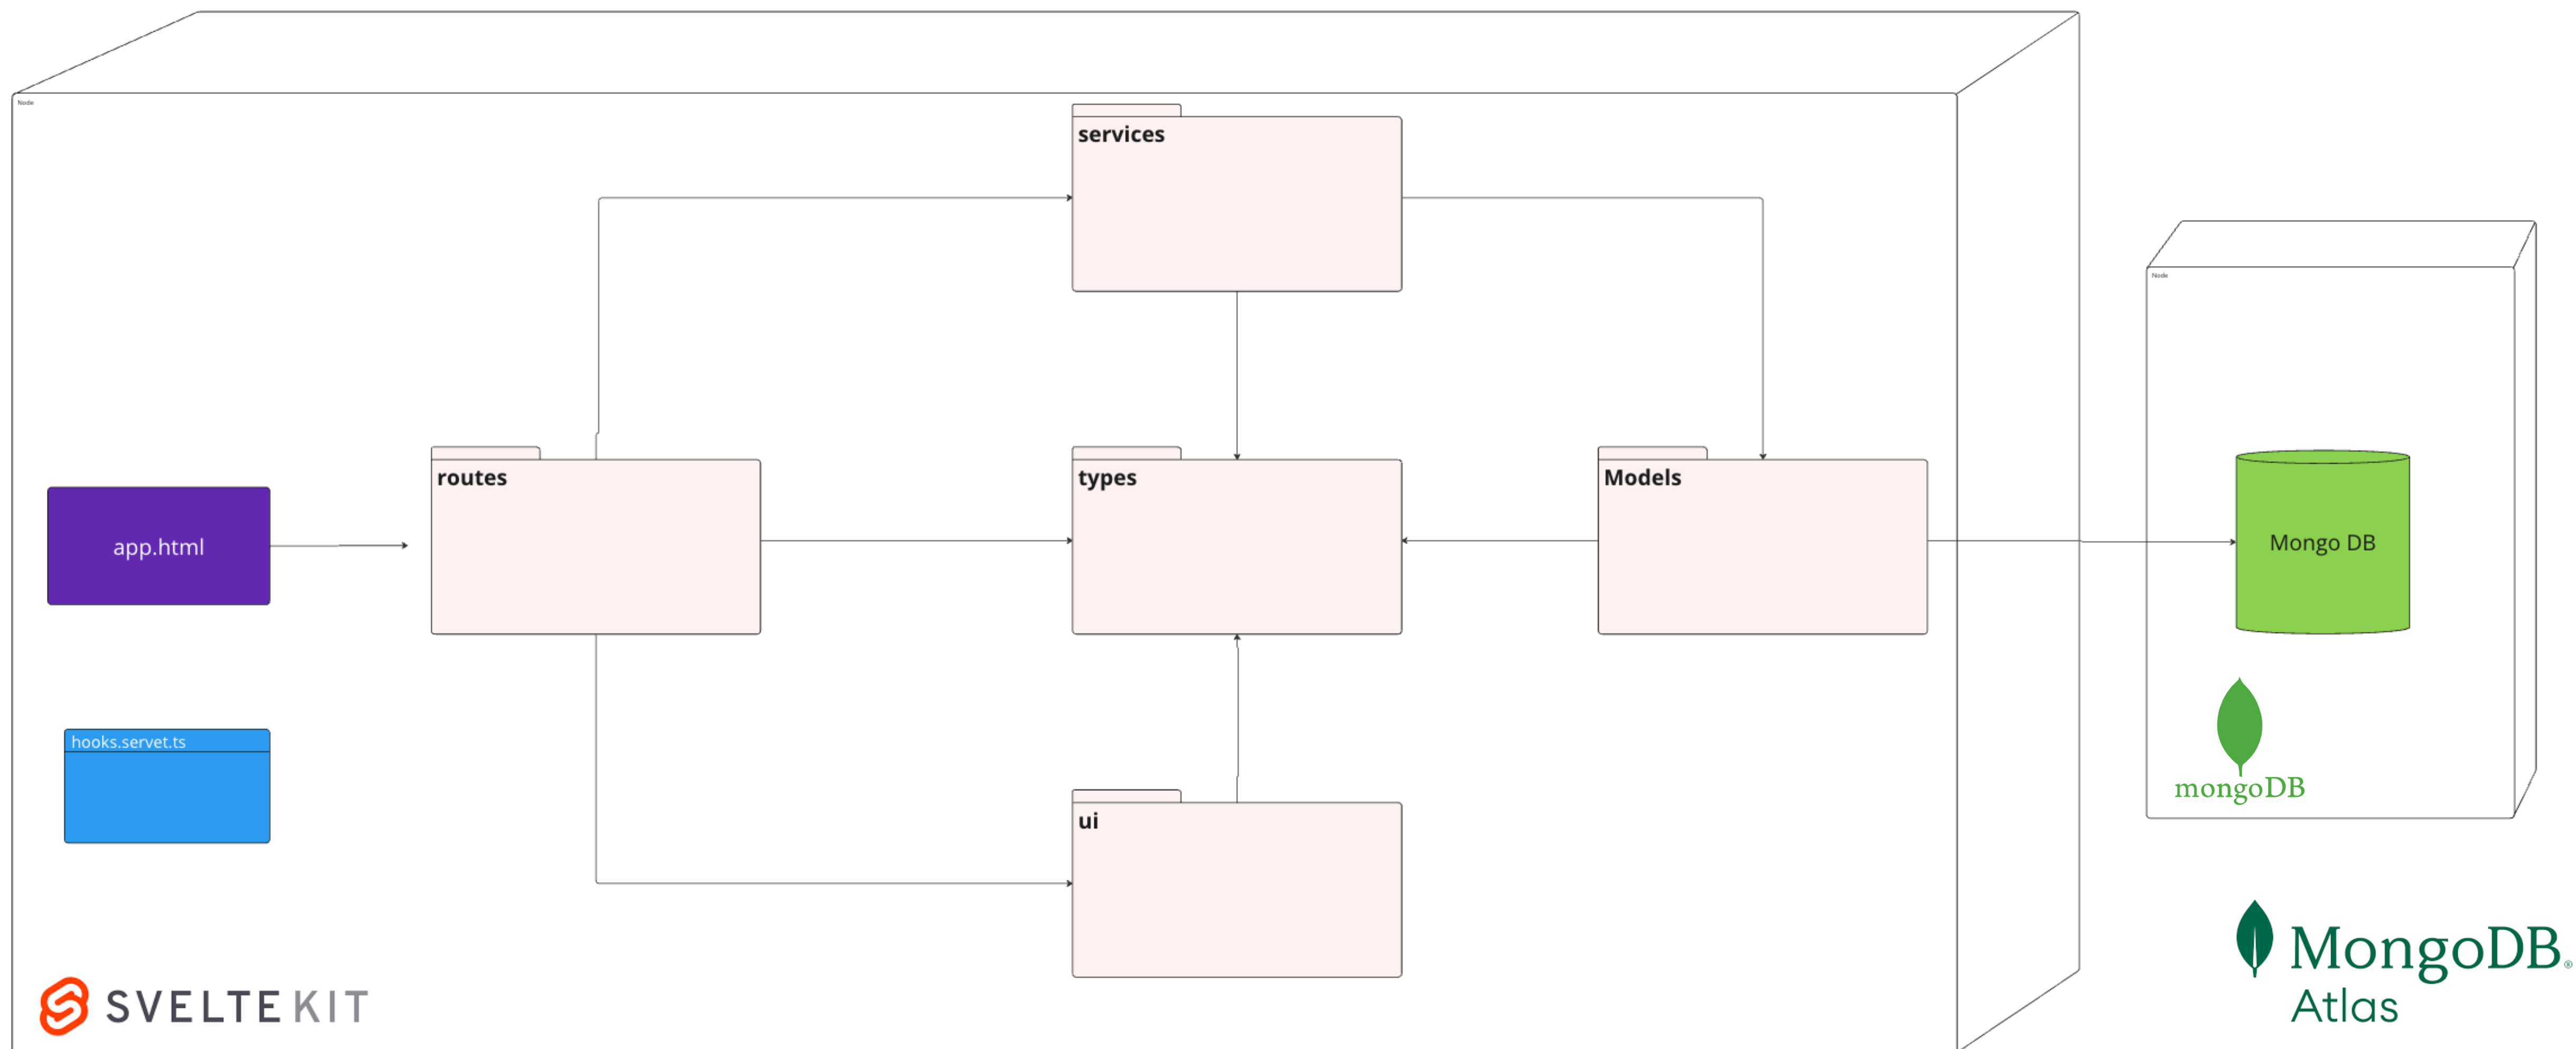

# Donation Full Stack Architecture

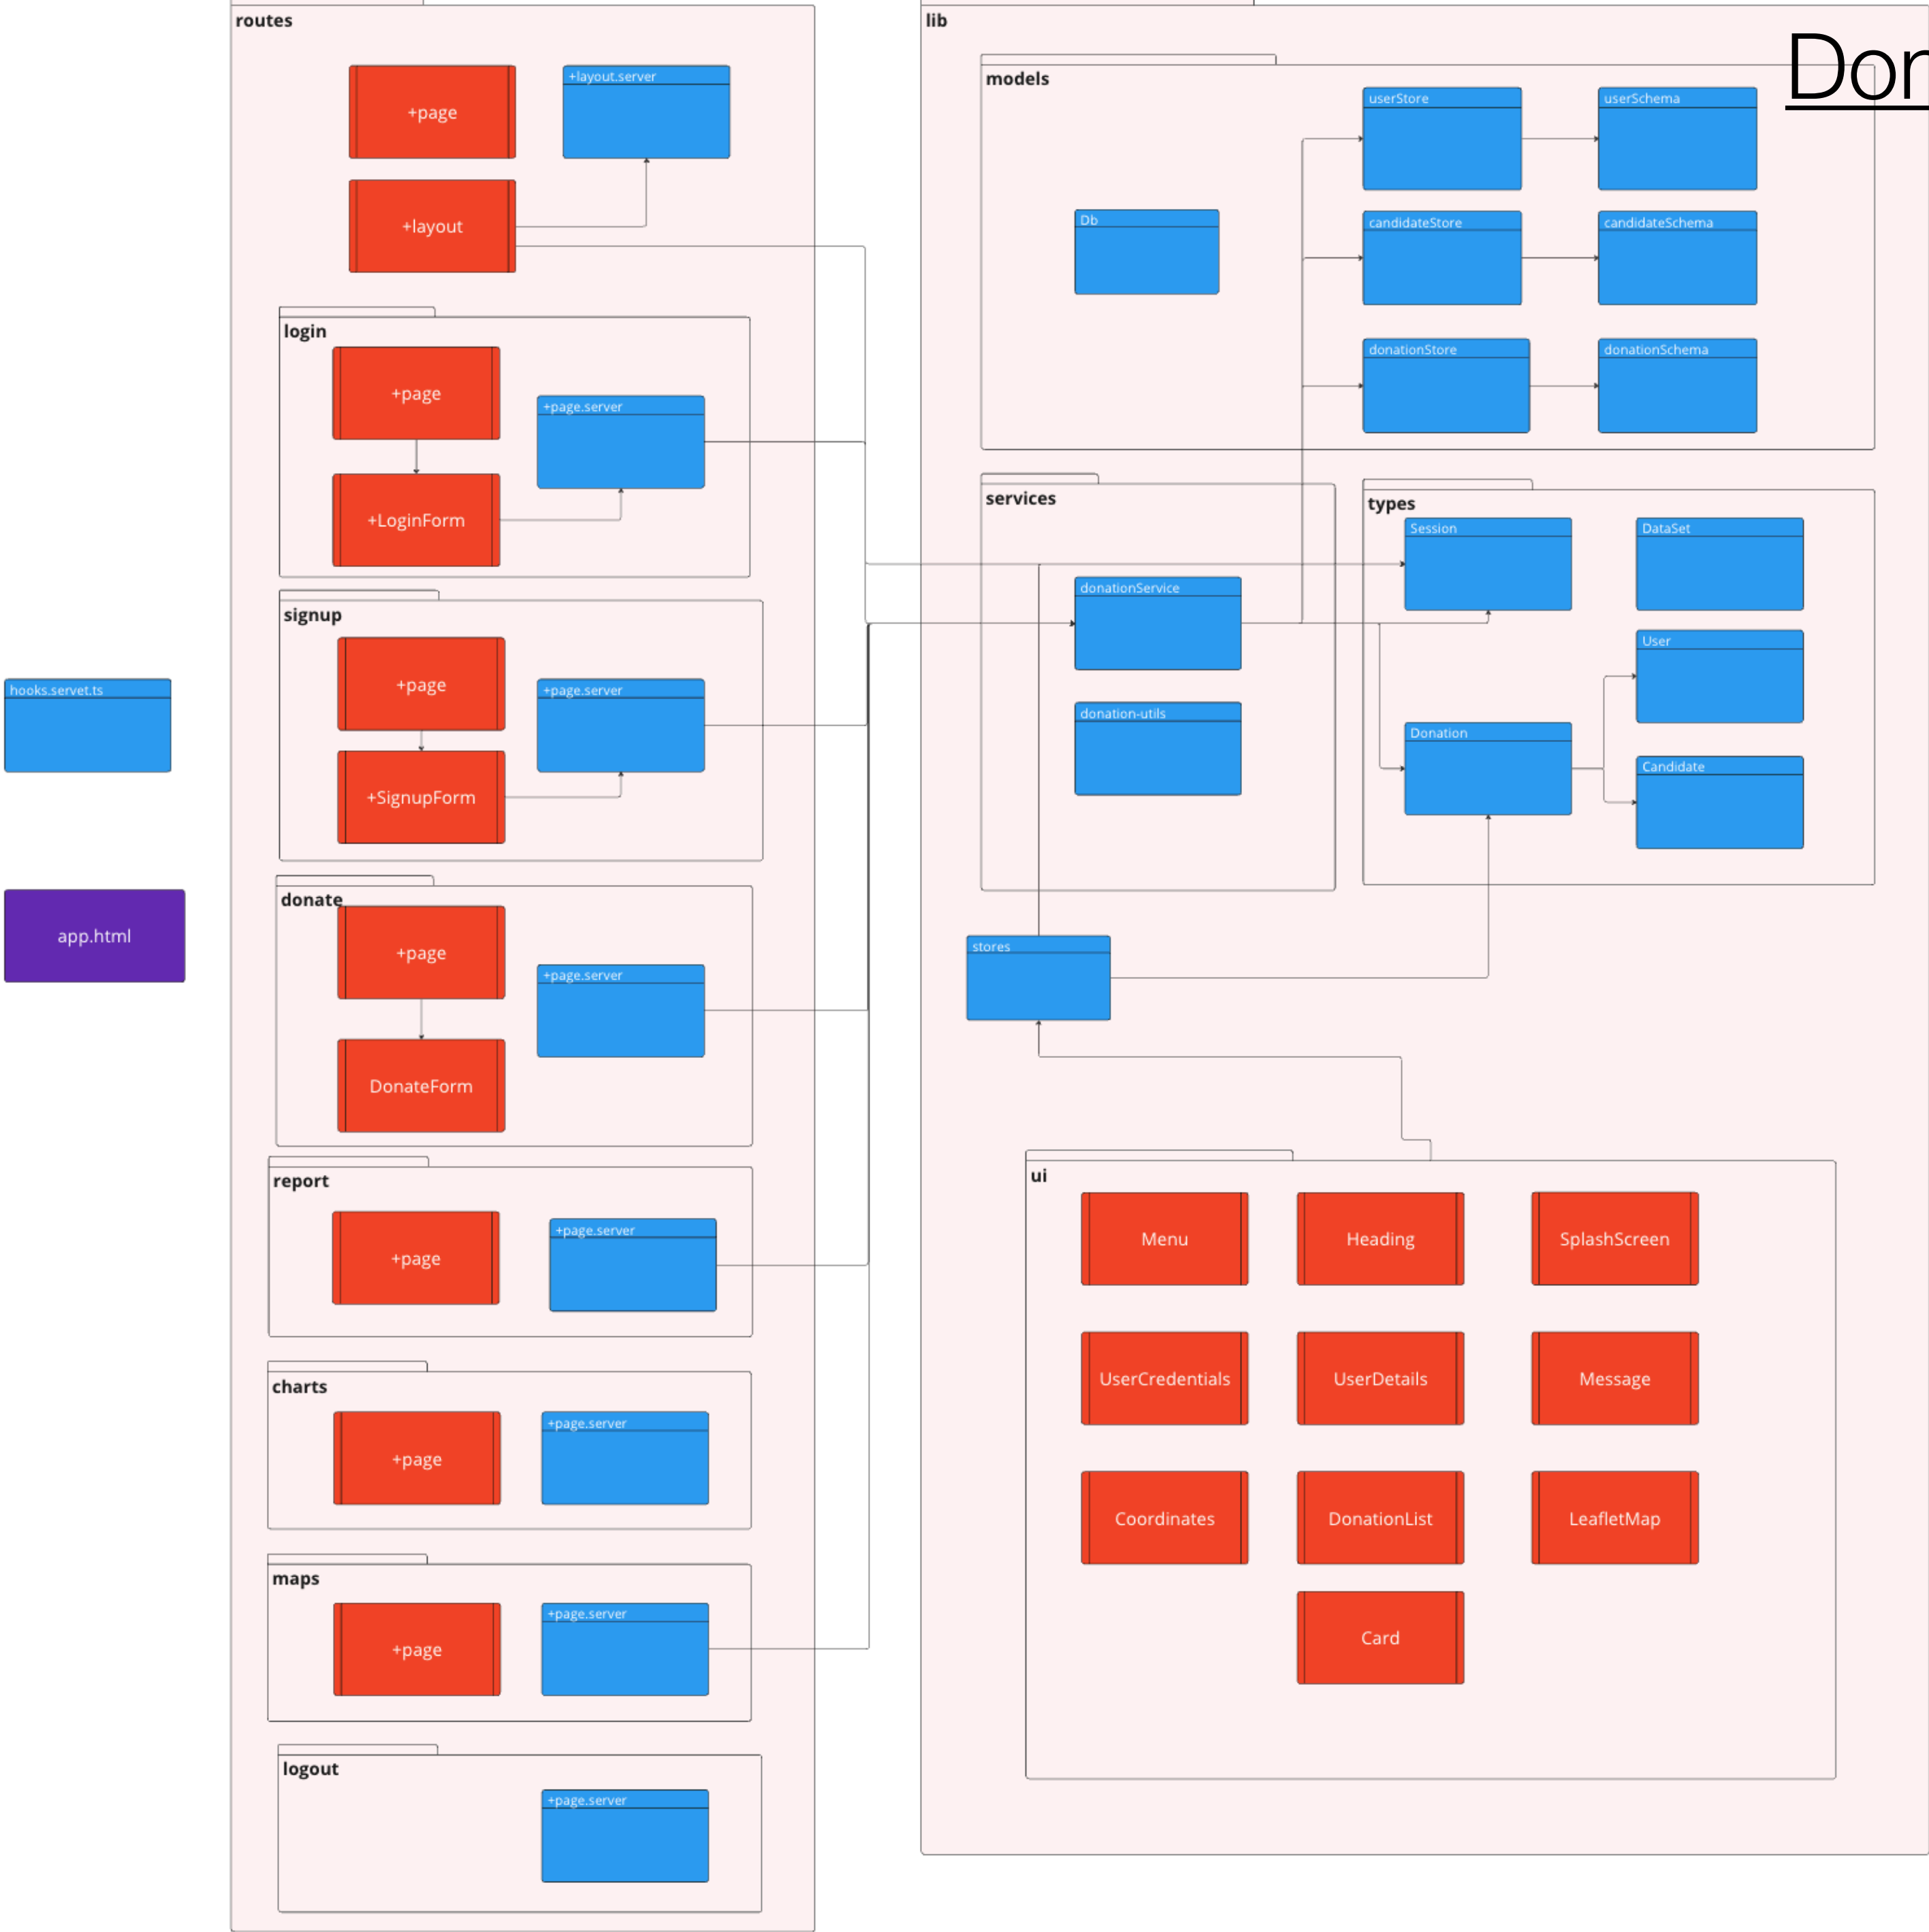

- Incorporate Models package from donation-api directly into SvelteKit application

# Donation Full Stack Deployment

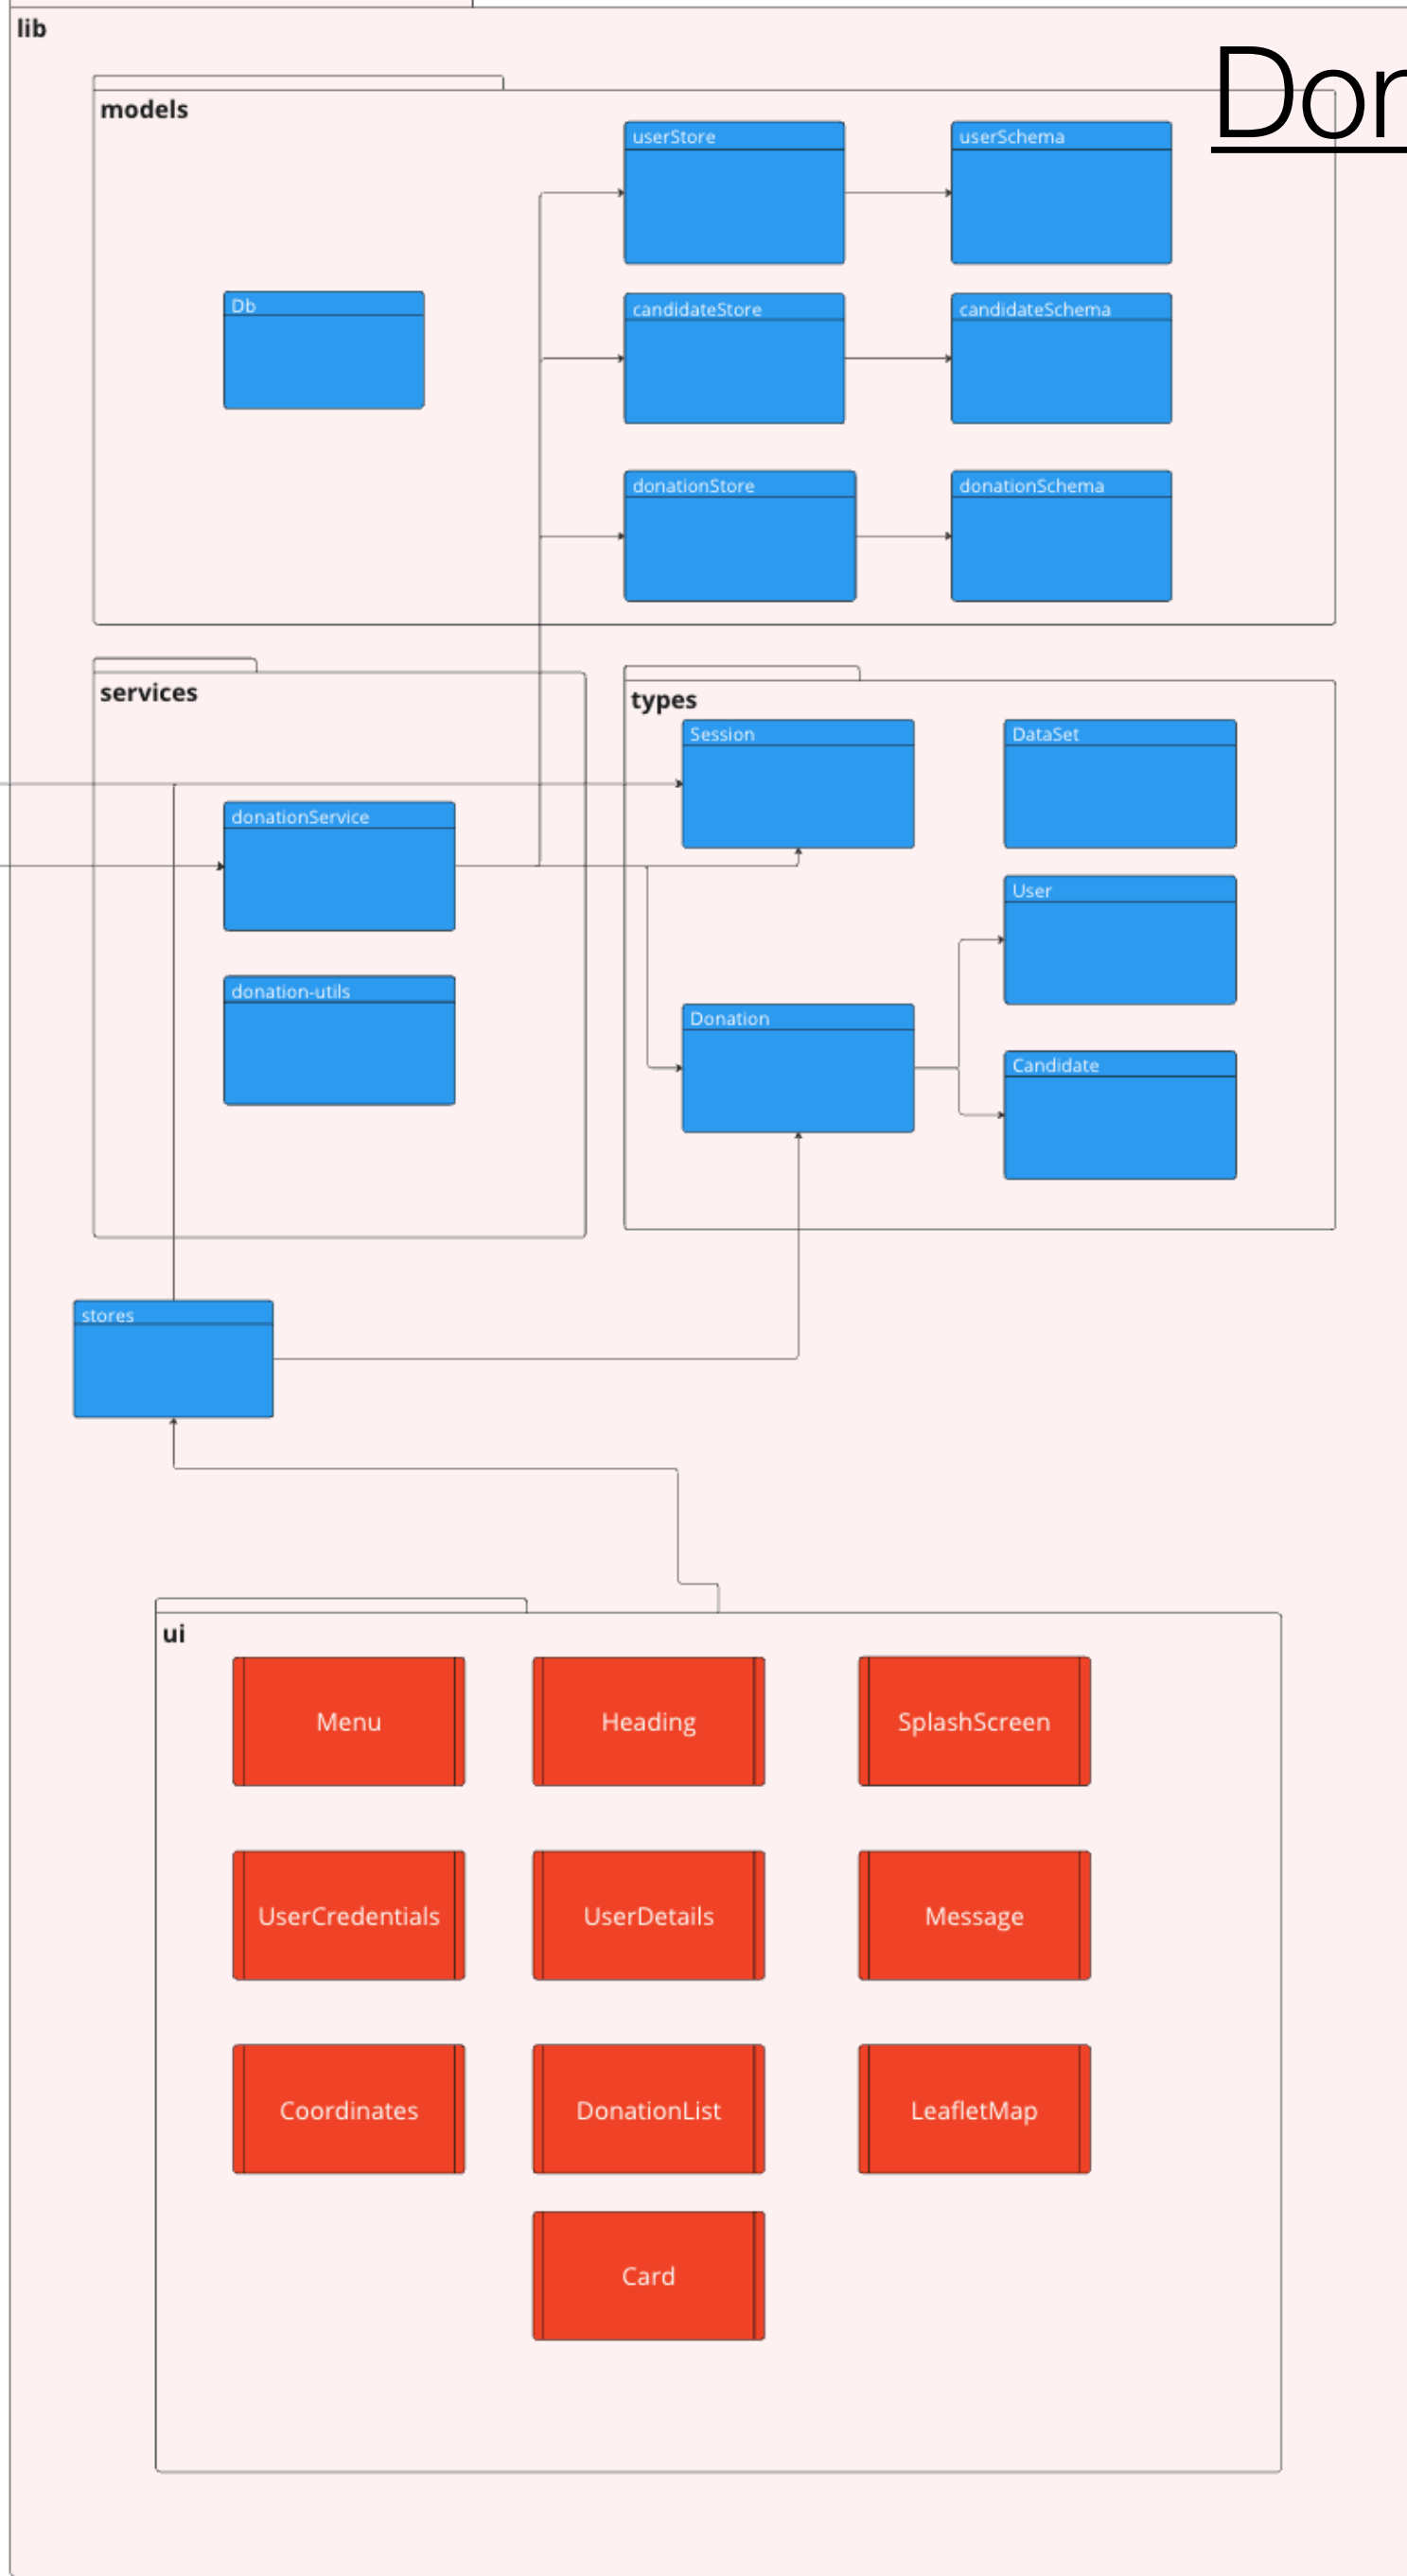

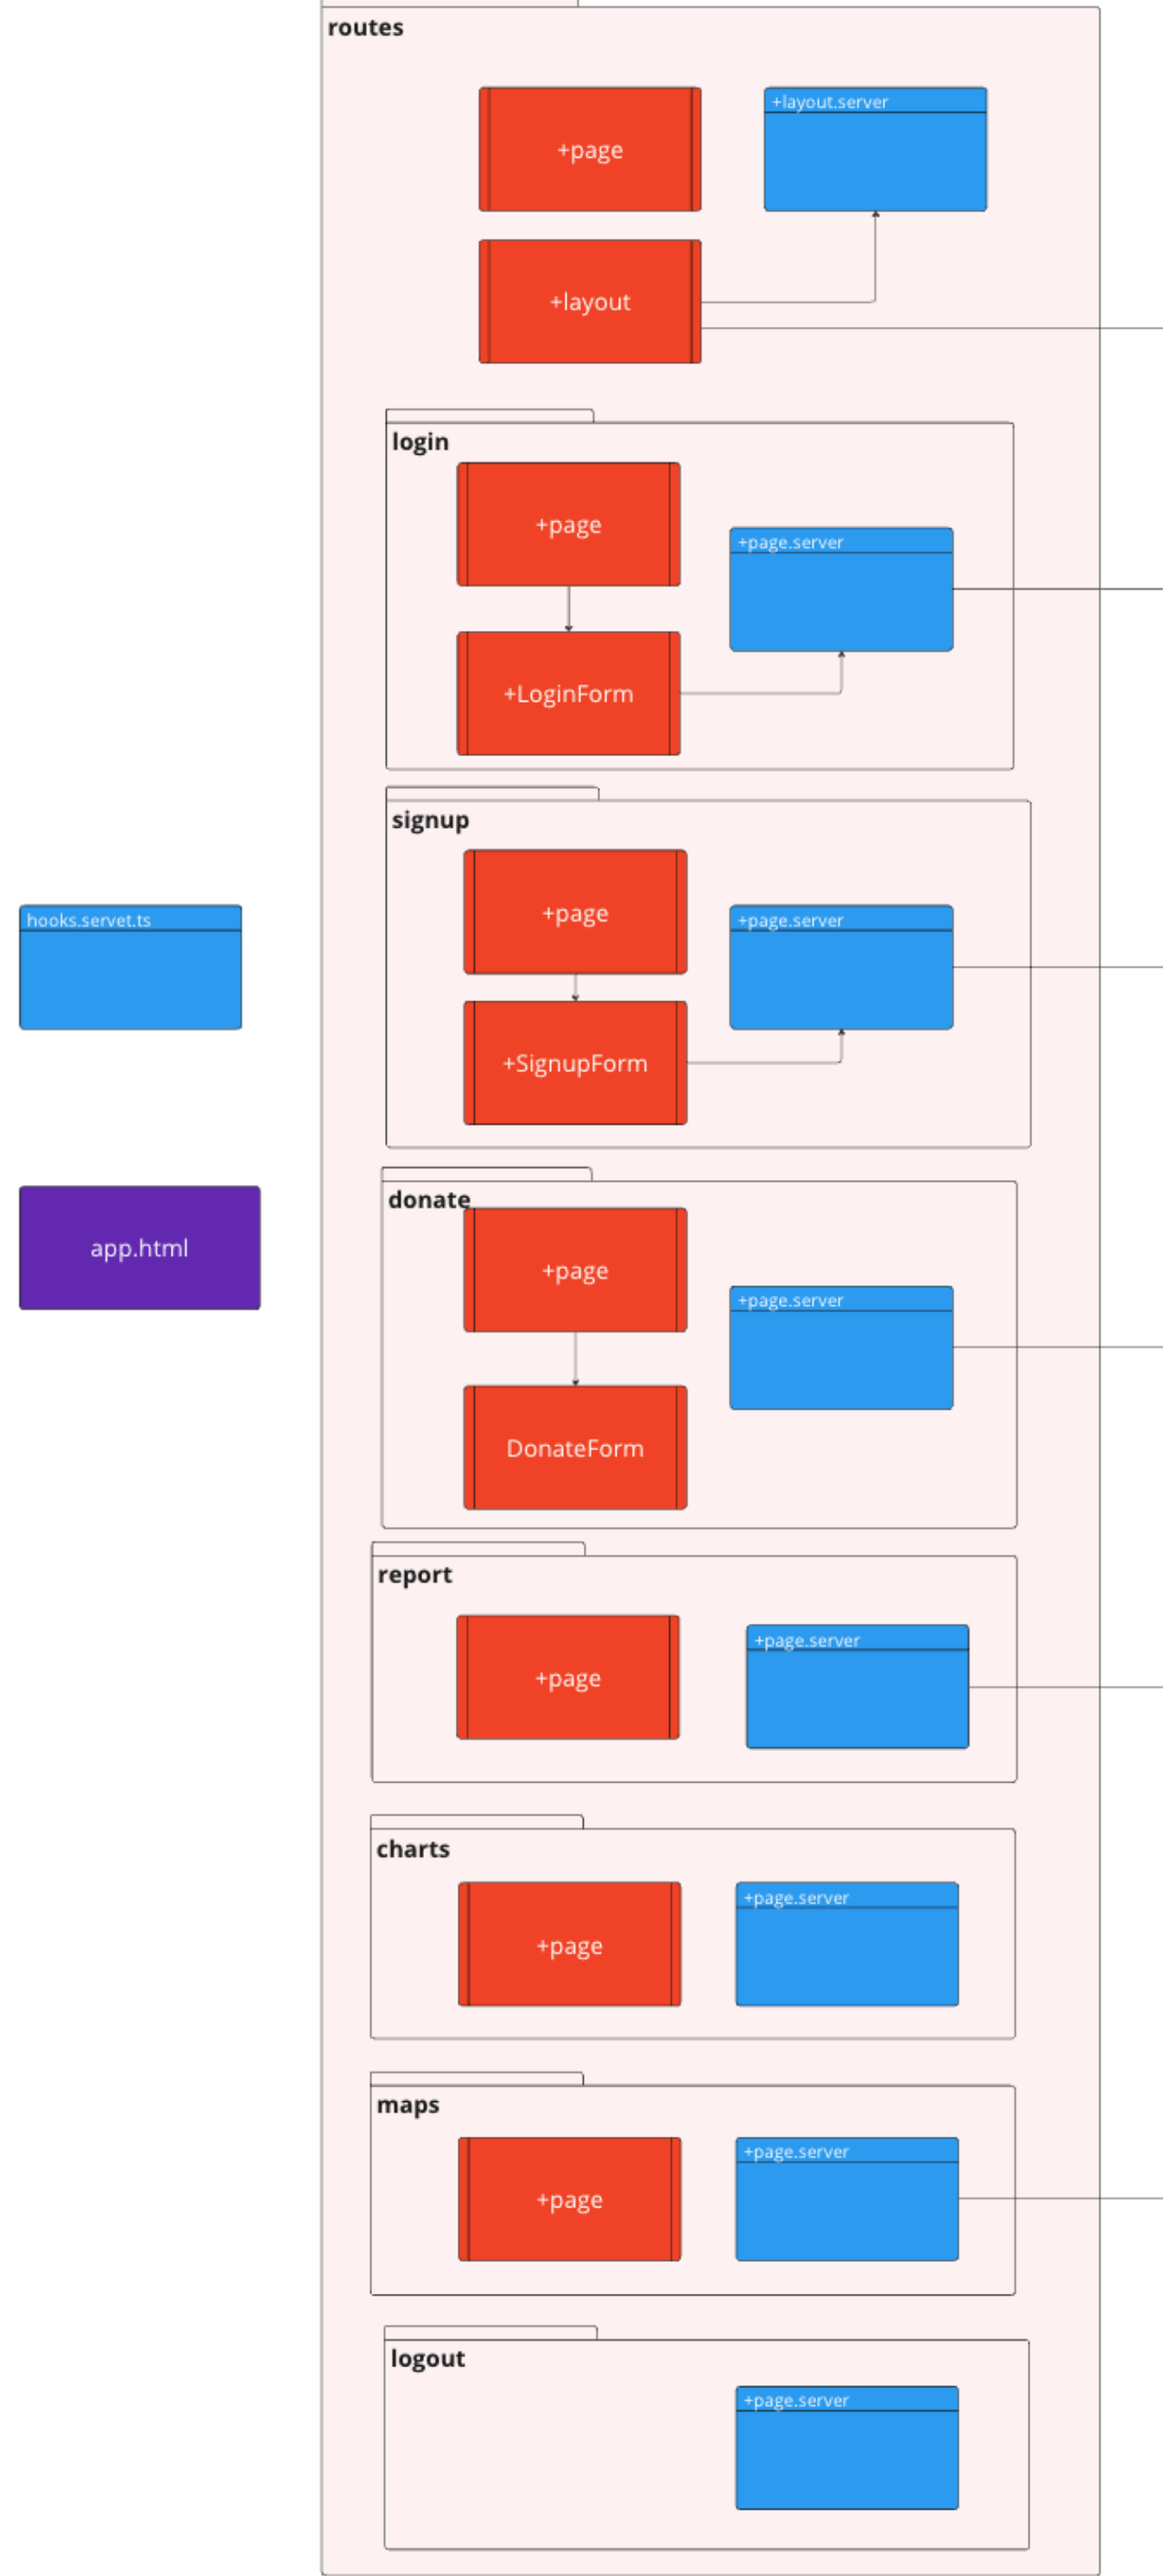

# Donation-svelte-08-full

# Donation-svelte-08-full
